Enable smart new ways of working

DevOps, better together with Azure DevOps & GitHub

Successful organisations today are flexible, responding to change in rapid cycles to deliver value faster, better and cheaper.

To achieve these 'DevOps' ways of working you need the right **people**, **processes** and **platforms.** In this brochure we focus on how we help you adopt Microsoft Azure DevOps and GitHub **platforms** for DevOps.
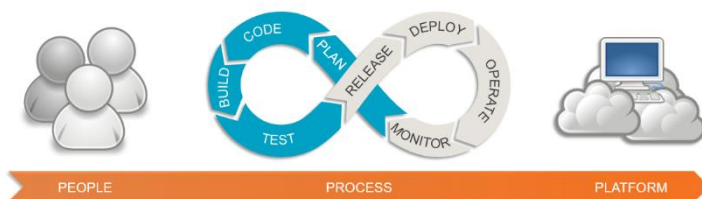

Adopting and optimising Azure DevOps and GitHub platforms

DevOps is supported by effective technology platforms to deliver faster and better value.

We help clients adopt, configure and optimise Azure DevOps and GitHub to work perfectly together. These platforms enable your teams to work in smart new ways using projects and repositories, digital task boards, continuous integration, continuous deployment, automated testing, automated builds, automated deployment and more.

As Microsoft continues to evolve the Azure DevOps and GitHub platforms, we'll be there to guide you on the journey to get the most out of the new features and benefits.

We're a Microsoft Gold Partner for DevOps and New Zealand's only Verified GitHub Partner.
