

HIGH PERFORMANCE CLOUD FILE STORAGE

Modern organizations must rethink how they interact with data and how the data is managed. Leveraging Azure and LucidLink technologies will promote increased productivity, collaboration and allow for growth across the organization.

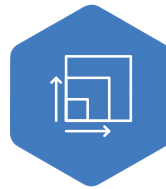

With disruption affecting every sector, the need for flexible and reliable storage has never been greater. To survive and thrive organizations must find better ways to access and manage their data as they move towards the future.

On-Demand

Integration

Scalable

Secure

Taking a holistic approach to migrations is one of Managed Solution's strong suits. Our experts will work alongside your team to plan and implement your storage migration to the cloud. During this journey, our team will identify how your organization currently interacts with data and build a custom solution to best support individual business units, remote workers, and specific applications.

Use Cases:

- **Concurrent data access and collaboration for remote users regardless of file type and size.**
- **Leverage direct to cloud storage to avoid additional expenditure on hardware. Great for backup or video storage.**
- **Perform CAD/CAM work from the office or remotely without performance degradation.**
- **Virtually infinite storage expansion with a traditional, local file share experience.**

The Lucid Link implementation provides your workforce a traditional file share experience without the frustrating downsides.

Goal is to enable organizations to regain productivity and efficiency in the new, dynamic, and fluid working conditions.

Starting at only

\$2,500.00 implementation
\$30 /TB /MO + Azure Storage
