

Manage O365

Delegate Users & Licenses administration to BU

Do you have multiple locations under one Office 365 Tenant? Are you able to manage the users of all your locations and units? Are you able to manage the licenses efficiently with users leaving and joining often? Solve your trouble by delegating partial control to country or location admins.

Manage O365 is a tool that will allow you to delegate the user management and license management to your localized administrators. You can define your segregation by Business Unit, Country, Location or any unit that you would want to subdivide administration. Once the Units are defined, you can allot prefixed subscription licenses from your Office 365 pool and assign a responsible local administrator for the unit. The tool will ensure the local administrator can only use the allotted licenses and edit users falling within the localized region.

Why customers use Manage O365

- Too many users & locations to be managed by HQ IT Team
- Distribute and Allot Licenses from O365 pool to local admins
- Track all administrator actions through activity logs
- Generate costing by cost center or locations as per allotted licenses

Organization distributed by Many Groups or Locations

- Difficulty in managing users and licenses for different groups, locations, countries outside of Head Quarter Office
- Global Admins have no idea about isolated remote location users or their license needs

All changes are directly updated and reflected from Office 365

Audit Logs for Compliance & Accountability

- All your changes done for Office 365 License changes are logged and recorded
- Periodical changes and license utilization can be analyzed out of historical log records
- Costs can be controlled by studying utilization by Units

Additional Metadata for Users can be stored

No Compromise of Office 365 Administration Access

- Office 365 Admin access is reserved for Global IT in HQ
- Delegate only the user and license management access

Protected from constant Office 365 changes in UI or functions

App is in use for Pan Pacific Hotels Group more than 2 years without any impact or support even when Microsoft Office 365 has been constantly changing and adding features. They have been using the solution to manage their centrally procure O365 licenses for all hotels across the region.

Manage O365 is built on Microsoft API and runs on Azure in isolation from O365

Use Cases for Customer Benefits

- Multi Group Company is able to manage licenses for users spread across 32 locations/countries
- Tenant with more than 5000 users are managed through the tool without any issues
- Internally Costs are billed to groups with valid invoices and utilization reports
- All locations have their own AD which is centrally synchronized with Office 365 allowing their O365 licenses to be managed
- Additional Customized processes to help Global HQ
- Manage License requests in one place with approvals
- Additional User Properties managed and synchronized with Exchange Online Custom Attributes for use in Distribution List
