

Service Offering Azure Platform Review

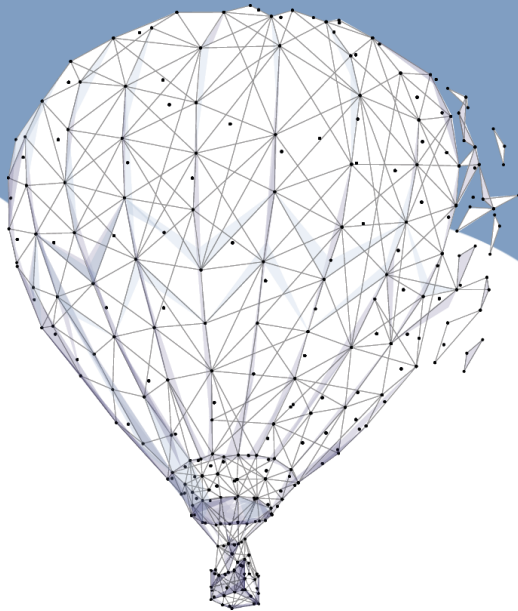

Quorum have been working with our clients to adopt cloud services since 2013. As a Microsoft Gold Partner and a Microsoft Direct Cloud Solution Provider (CSP) we are experts in Microsoft Azure and Microsoft 365 platforms. We recognise that your business is unique and our solutions can be customised to meet your business needs.

Our experienced team of cloud consultants can take you through the journey to the cloud, from business case to full cloud adoption, to help you maximise the benefits of the cloud no matter where you are on your cloud journey.

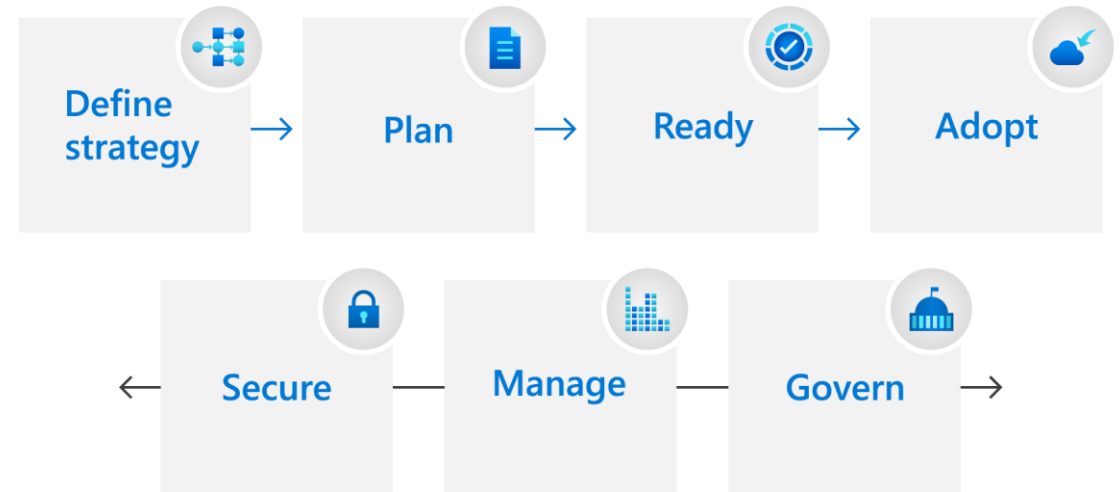

Azure Platform Review

As cloud adoption increases, with ever growing demand for new services and capability, IT departments are now looking to scale their Azure Platform. With an increase in scale, comes an increase in complexity, and a need for a coherent foundation that supports the demands of new business workloads.

As organisations continue to adopt Azure, best practice guidance for cloud adoption and migration continues to be developed. The Microsoft Cloud Adoption Framework for Azure captures this best practice guidance, and provides a framework for cloud adoption, including changes required in people, process and technology.

Cloud Adoption Framework for Azure

<https://aka.ms/caf>

The **Azure Platform Review** service is designed to review your Azure environment, and assess it against a set of best practice recommendations in line with the Microsoft Cloud Adoption Framework. The objective of the engagement is to provide you with a prioritised list of recommendations to ensure your Azure environment is well architected, well managed, and well governed to support your cloud objectives.

Design Principles

- Subscription democratisation
- Policy driven governance
- Control and management plane
- Application centric service model
- Azure native design

Strong Foundation

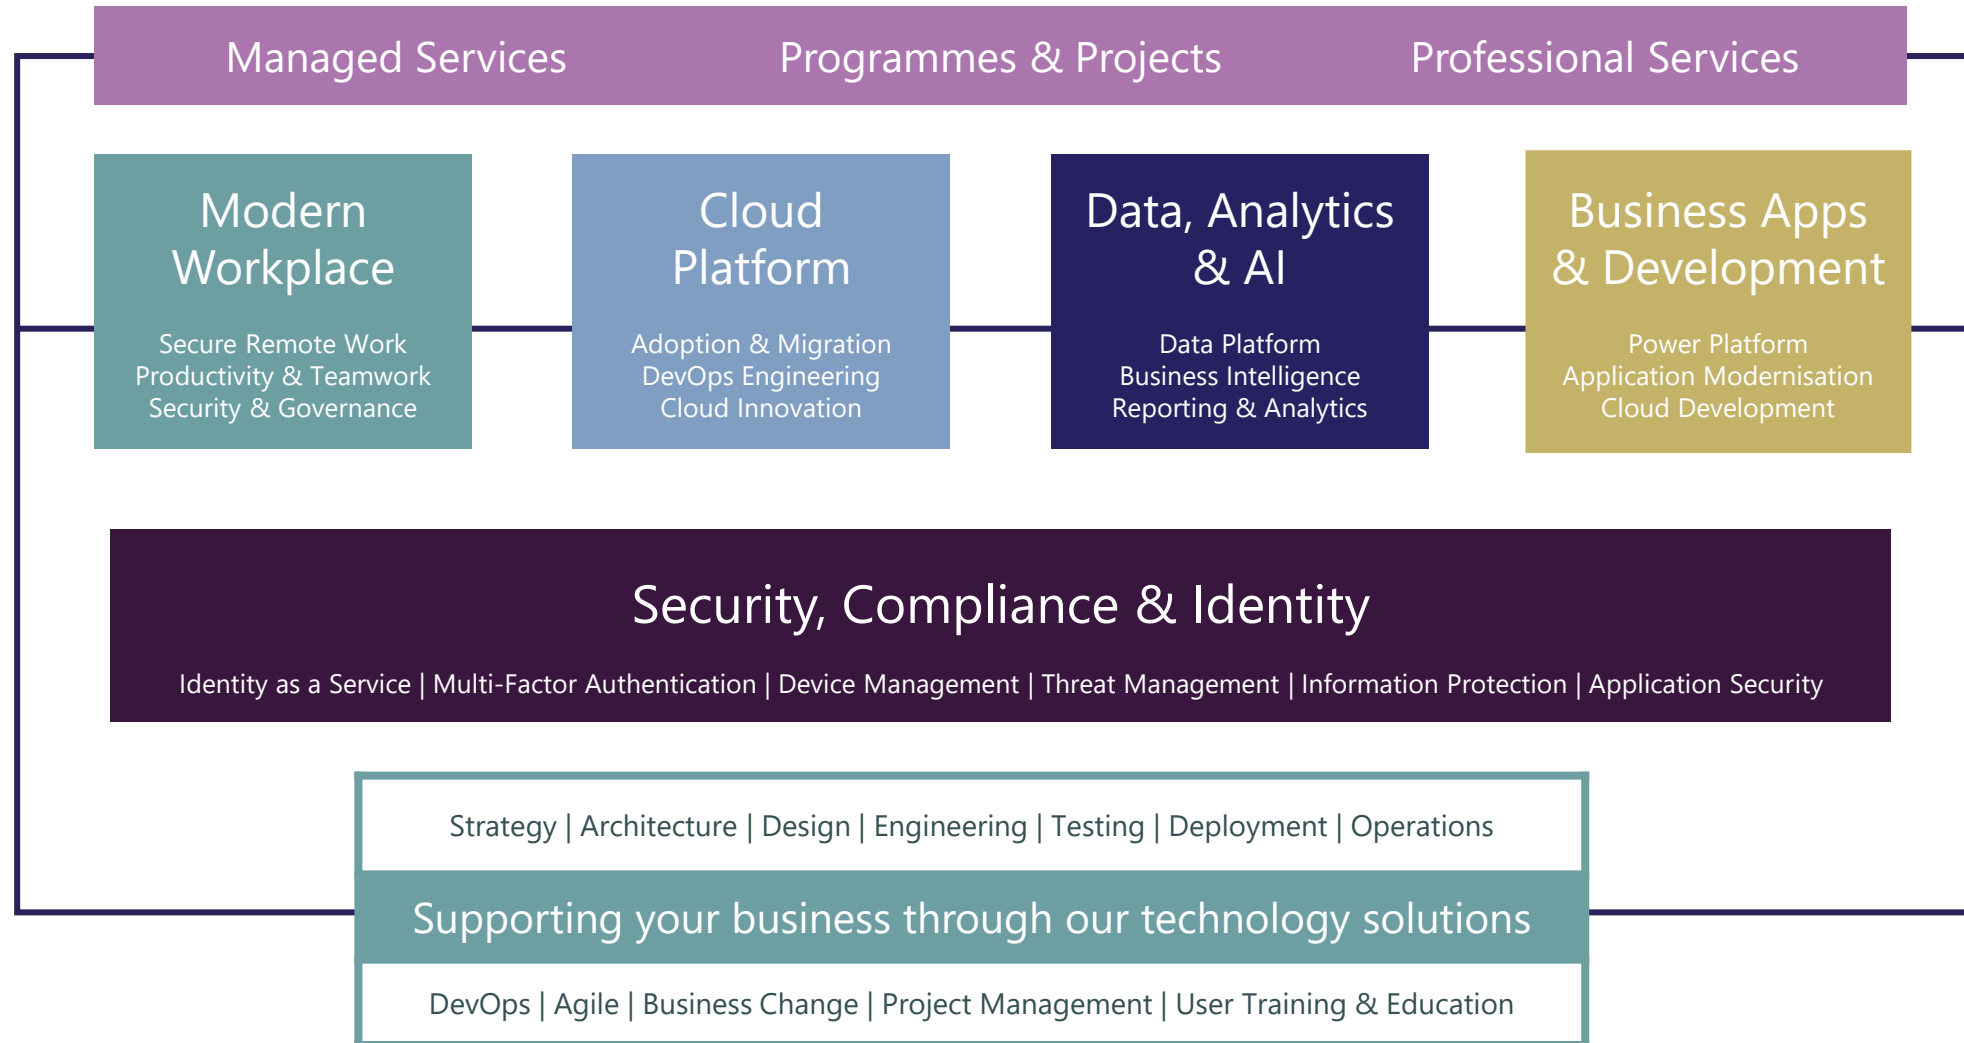

- Organise services and resources
- Manage secure access
- Manage costs and billing
- Governance, security, and compliance
- Monitoring and reporting

Azure Landing Zones

- Azure Active Directory tenant
- Identity and access management
- Network topology and connectivity
- Resource organisation
- Platform automation and DevOps

In-Scope:

- Azure landing zones
- Networking
- Role Based Access Control
- Azure Policy
- Security
- Regions
- Sizing
- Azure Defender
- Identity & Access Management
- Availability
- Naming conventions
- Current deployment methods
- Sizing Azure resources appropriately
- Cost optimisations
- Future cloud adoption
- Considerations for Azure migrations
- Discussion with relevant team leads on their resources
- Review of any in place Azure processes or policies.
