

WSO₂ Identity Server

Deliver seamless login experiences

WSO2 Identity Server is an API-driven, open-source, cloud-native IAM product. Our developer-first approach helps enterprises to significantly lower costs, modernize and consolidate IAM and CIAM capabilities.

Leverage the power of flexible IAM to innovate at speed, build secure solutions and create experiences that your users will love.

Our Customers

Why our customers love WSO2 Identity Server

Identity federation and single sign-on

Enables federated access to web and mobile applications using open identity standards.

Identity bridging

Facilitates exchanging identity attributes and authentication decisions between heterogeneous identity systems in a seamless manner.

Adaptive and strong authentication

Enables applications to secure access with multi-factor authentication based on environment, user attributes, behavior, and risk.

API and microservices security

Ensures secure access to APIs and microservices based on open standards.

Account management and identity provisioning

Helps to manage users and groups with automated provisioning and approval workflows.

Access control

Helps to manage access to applications in the login flow, with fine-grained policies, and act as a policy decision point for third-party applications.

Privacy and consent management

Enables privacy and gives users control over their data with consent lifecycle management and data security that adhere to privacy by design and privacy by default principles.

Identity analytics

Provides administrators with insights related to authentication, concurrent sessions, and anomalous login patterns.

How does WS02 Identity Server drive value?

Faster time to market with open source and open standards

High flexibility to support complex IAM use cases with an extensible architecture

The only IAM vendor that is backed by an integration platform that also provides an API manager and enterprise integrator for robust CIAM

Transparent core-based pricing model enabling you to grow your business and keep costs consistent as you add more customers

Speed integrations with out-of-the-box compatibility with cloud and on-premise applications, third-party authentication systems, and social Identity providers

Low-risk and scalable to fit any need or use case; our largest customer manages over 106mn customer identities
