Helping customers focus on what truly matters: **Their business**

We are dedicated towards addressing the business needs of customers looking to use SAP as a service, without the overhead of an on-prem solution.

CHALLENGES

- Lack of expertise
- Cost of ownership of on-prem SAP certified infrastructure
- High availability and disaster recovery for mission-critical components such as SAP

IDEAL SOLUTION

- Partner as a “trusted advisor” in both SAP and cloud environments
- Outsourcing of all SAP-related services
- Predictable OPEX cost
- True redundancy and HA

DESIRED OUTCOMES

- SAP as a service, 24x7 availability
- Customer focused on their business, not on managing SAP
- Cloud-grade performance, security, management, redundancy, HA

S&T Romania's SAP excellence and expertise

S&T Romania is one of the most well-known and long-standing SAP partners in Romania. In Romania, S&T's service portfolio includes SAP basic operation and application management as well as services in the new S/4HANA and S/4HANA Cloud environments.

Consultancy services for SAP

- SAP on Azure solutions
- SAP private cloud solutions
- SAP on-premise solutions
- SAP hybrid solutions

Development and Application Management

- Delivering customized SAP solutions
- AMS services

Data migration and Testing

- Complete data migration services
- Testing plans for new features and development-related changes

1st and 2nd Level Support

- User support
- Key User Support
- Incident Management

- Service and change request management
- Adoption and improvements of customer specific extensions

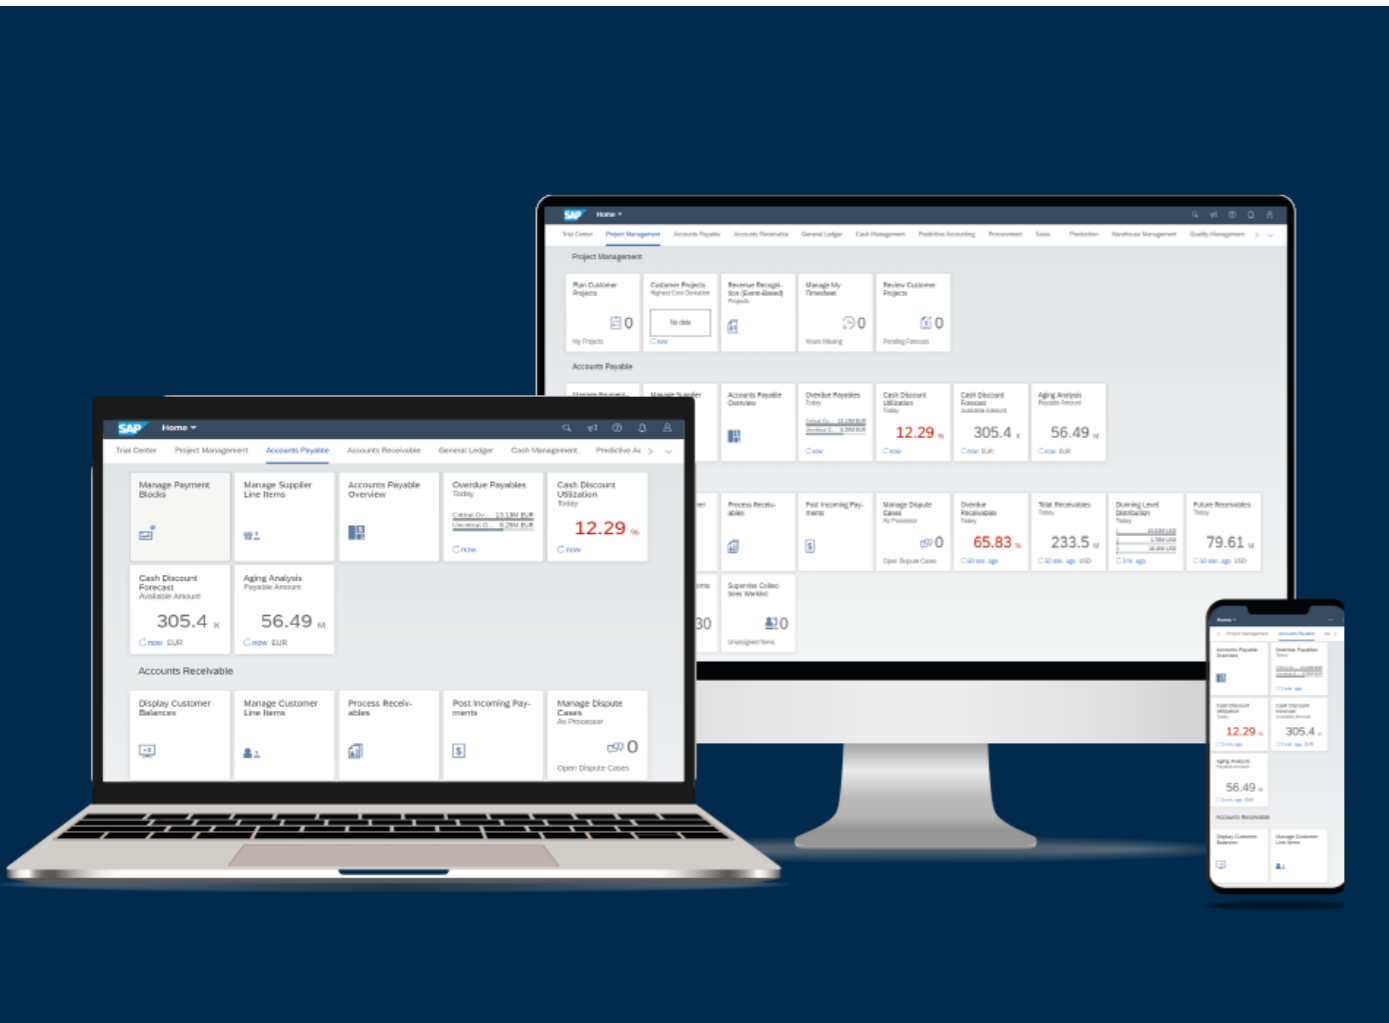

SAP Application Management

Maintenance

- Planning and execution of maintenance tasks
- Consulting on new features
- Implementation
- Project management

Continuous Change

Continuous Improvement

SAP on Azure

Delivering professional integration services for SAP ERP systems is one of S&T Romania's focus points. Our SAP team is well-known for excellence and experience gained over 15 years of delivering successful SAP projects.

1

Production and test/dev workloads

- SAP certified infrastructure
- Scalable, elastic, cost-controlled
- Deployed with Infrastructure-as-Code best practices

2

Disaster recovery solution

- True HA and DR delivered through Azure's global presence and resilient network
- Safe migration and workload security

3

Agility and scalability

- 24x7 operations and support
- ITIL processes
- Cloud-grade flexibility

SAP on Azure PoCs and dynamic projects

Ever-changing projects and addressing the “unknowns” in current SAP initiatives can be thoroughly addressed using S&T’s SAP on Azure approach

CHALLENGES

- The need for temporary testing infrastructure
- PoCs for tangible benefits acting as proof for customers
- SAP HANA adoption
- Running multiple parallel projects

IDEAL SOLUTION

- Azure as a dynamic, elastic environment for any type of deployment
- Decide on PoC requirements and instantly deploy the infrastructure
- Automate everything with Infrastructure-as-Code

DESIRED OUTCOMES

- Performance on-demand, as well as pay-as-you go cost control
- Automate and optimize the entire environment, including its cost
- Flawlessly deploying agile, constantly-changing projects

SAP on Azure High-Availability for On-Prem

Requirements that address redundancy and high-availability often require additional secondary locations. These deployments are designed as high-availability, but also as high-cost.

CHALLENGES

- Secondary locations for HA/DR
- Avoiding huge CAPEX investments in secondary locations
- Addressing maintenance costs for such locations

IDEAL SOLUTION

- Azure is designed from the ground-up as an HA/DR environment
- No CAPEX investment necessary
- Instantly decide to use, deploy, fail over to or destroy the secondary site

DESIRED OUTCOMES

- True HA and DR, 24x7
- Business “peace of mind” with its core infrastructure protected against disasters, outages and even human error
- Ability to run secondary locations in economy mode
