# VMware Horizon Cloud and Windows Virtual Desktop (WVD) on Azure Workshop.

**Helping organisations understand the use cases and benefits of VMware Horizon Cloud on Azure and Microsoft Windows Virtual Desktop.**

With the speed of change in current market conditions and the need for flexibility and remote working, having a solution that delivers virtual desktops and applications using a purpose-built cloud platform that is scalable across multiple deployment options including hybrid and multi cloud has become paramount to business agility.

Business want to feel assured during these uncertain times that they have the tools to empower their staff to work from anywhere, at any time in a secure and friction-free manner. At the same time, IT managers must always maintain an overview and be able to react quickly despite the high complexity of deployment and operation of hybrid cloud infrastructures.

Horizon Cloud delivers feature-rich virtual desktops and applications using a purpose-built cloud platform that is scalable across multiple deployment options, including fully managed infrastructure from VMware and public cloud infrastructure from Microsoft Azure. The service supports a cloud-scale architecture that makes it easy to deliver virtualised Windows desktops and applications to any device, anytime. VMware Horizon Cloud on Microsoft Azure includes support for Microsoft Windows Virtual Desktop (WVD) as an integrated part of Horizon Cloud on Microsoft Azure. The combination of the two offers customers a rich set of features in deploying and managing remote workplaces. And in combination with Microsoft 365, this results in secure and modern workplaces for all employees - available anytime, anywhere and on any device.
