# PowerApps Maker Enablement

Ensure Security While Unlocking the Power of PowerApps

To survive and thrive in today's competitive business world, you have to become more agile and efficient. Modernizing your operations through the cloud and digital transformation is key to making this happen.

Microsoft PowerApps is a low code/no code tool for automating processes and building business applications that support digital transformation and your new modern workplace. It empowers business users to create and customize data-driven and task-specific apps in-house.

While PowerApps provides unlimited opportunity for helping meet your changing business needs, without proper guidance you could be putting your company's security at risk. Hitachi Solutions has the ideal training to help you fully leverage PowerApps while maintaining corporate best practices, security, and governance.

The Challenge

- New mission critical technology that can dramatically affect the growth and success of your company
- Uncertainty around how security and compliance are going to be affected
- Need to maintain control and ensure scalability

The Solution

- In-depth training & guidance
- Best practices knowledge transfer
- Assessment & discovery of current state
- Collaborative development of initial apps
- Validation of maker readiness

The Value

- Enhance your digital transformation efforts & speed time to value
- Maintain best practices that help administrators ensure security & control
- Improve governance & validation over approval processes
- Ensure controlled scalability & future growth

What is PowerApps?

Microsoft PowerApps is a suite of apps, services, connectors, and data platform that provides a rapid application development environment to build custom apps. Apps built using PowerApps provide rich business logic and workflow capabilities to transform manual business processes to digital, automated processes. They also have a responsive design and can run seamlessly on the web or on mobile devices.

Microsoft PowerApps benefits include:

- Empowers employees to make business improvements
- Streamlines, automates, and extends existing business processes
- Provides simplicity, speed and agility for software delivery
- Lowers development costs and resources
- Easily connects to more than 250+ data sources & applications
- Provides deep integration with Office 365, Dynamics 365, SharePoint, OneDrive, Excel
- Instantly mobile ready

Hitachi Solutions

Why Take Action?

Traditional business application development has been very complicated, requiring developers and expensive custom code. PowerApps "democratizes" the custom business app building experience by allowing non-technical users to build feature-rich, custom business apps without the cost or complexity of writing code.

Its simplicity, flexibility, and connectivity have proven to reduce resources and development costs by 70% and increase overall business efficiency and ROI.

Our Solution

Hitachi Solutions PowerApps Maker Enablement service provides the expert guidance you need to move forward with confidence. It is ideal for companies who want to maximize the power of the platform while still following best practices and maintaining corporate governance and security.

The service is a unique and comprehensive offering that goes well beyond typical PowerApps training courses. The PowerApps Maker Enablement solution includes:

- In-depth PowerApps, Flow & Common Data Service training
- Security, governance & administration knowledge transfer
- Discovery around current state manual processes
- Collaborative development of PowerApps and Flows
- Validation of PowerApps maker readiness

We've done hundreds of client engagements around Microsoft's Power Platform and bring that experience to you. Our PowerApps team works with you to evaluate your current environment so we can develop a training customized for your unique business needs. Benefits include:

- Arm your employees with the skills they need to become productive PowerApps & Flow makers
- Enhance your digital transformation efforts & speed time to value
- Provide valuable hands-on assistance in developing initial applications to get you started
- Maintain best practices that help administrators ensure security & control
- Improve governance & validation over approval processes
- Provide a framework that allows for scalability & future growth

Tackle Potential Blockers

PowerApps is marketed as programming for non-programmers. But the seamless interconnectivity it has with other software products means it can become part of some very complex enterprise applications. This can be a little scary because using PowerApps without paying attention to industry standards and a proper framework can have determinantal effects on your business. Things to consider include:

- This is mission critical technology that can affect the success of your company
- You're unsure of how security and compliance are going to be affected
- You're concerned about scalability and maintain control

While attending a standard PowerApps training course may provide basic knowledge about the power platform, it won't give you everything you need to know about security, compliance, and governance. And, you're on your own as you start building apps and flows.

Hitachi Solutions PowerApps Maker Enablement has much more depth than most other training options. Beyond the training, advice, and guidance, we work with your team to define initial app business requirements and work together on up to three PowerApps and Flows.
