

Linux & Open Source DB Migration

From Alpha Data

Alpha Data's certified professionals will discover, assess, and migrate your data to Azure using proven methodologies and only the best tools.

Lift & Shift Migration

Comprehensive
Documentation

Multi-tool expertise

USD: 1500\$

Implementation: 1-3 Days

Migration Benefits

- Support for all major Linux distros like Red Hat, SUSE, Ubuntu, Oracle Linux, Debian, CentOS, CoreOS, and OpenSUSE.
- Azure-tuned kernels provide 25 percent faster network throughput.
- Unique and integrated support experience. Our support teams work with Red Hat and the SUSE support team, to triage your support cases together.
- Minimal administration required for MySQL, PostgreSQL, and MariaDB with fully managed databases based on the latest community editions.
- The best total cost of ownership, high availability, and built-in intelligence provided by managed databases.
- Enterprise scalability with Hyperscale (Citus) which enables scaling of PostgreSQL across multiple servers and Query parallelization across those servers for faster responses.

DB Migration

Process

- Assessment and Planning
- Azure Workload migration approach with Best Practices
- Low Level Design
- Create Virtual Networks
- Migrate Virtual Servers - Lift and Shift (Native/ASR or Third Party
