Advisory services

Microsoft Azure related

Services

— **Technology advisory**
— **Training**
— **Technology mentoring**

Technology advisory

Microsoft Azure related, engagement up to 2 weeks

— Architecture analysis and selection based on requirements

 with Preview/Beta services if needed

 data solutions with classic-style and event-driven data lakes

 cloud-native, microservice application architecture in serveless, containers and Kubernetes

— Designing and reviewing enterprise-ready solutions

 enterprise network hardening

 secure by design

 governance

Technology advisory

Microsoft Azure related, engagement up to 2 weeks

— Architecture and Event Storming workshops

— Helping with cloud adoption for new or existing on-premises application

— Cost optimization

— Building and optimizing governance and operational processes

— Development process automation and optimization

— Ability to engage other Microsoft MVP in the areas of data analytics, AI, Power BI and Power Platform if needed

Training

— Training tailored to fit your needs

    Dedicated technical trainings and workshops

    Hackathons

    Microsoft Official Courses

    Level and needs measured to each group separately

— Unique approach

    Hands-on heavy

    Distilled to most practical parts

    Easily applicable knowledge

Technology mentoring

Subscription based model

— Become technical mentor for your team and/or system

— Availability for your team in different forms

"call a friend"

office hours

personal technical mentoring

on-demand online and onsite meeting for consulting and review

short trainings (up to half day)

# API Management Deployment

API Management Deployment
Engagment activities

— Client requirements analysis.
— Deployment of Azure API Management in the Internal/External VNet mode.
— Integration of three APIs in API Management instance with security, transformation, and orchestration policies.
— Full deployment automation using ARM templates and customer-preferred automation stack.
— Hands-on heavy technical workshop with customer, focused on API Management architecture, API configuration, API policies implementation, service monitoring and operations.

API Management Deployment

Target architecture

— Tailored to technical and business requirements.
— Best fit for enterprise security.
— Aligned with CAF (Cloud Adoption Framework).

API Management Deployment

Additional activities

- Deployment of hybrid API Management with APIM self-hosted gateway running in various locations, such as on-premises, collocation, other cloud providers.
- Multi-geography API Management deployment and DR configuration.
- Building API security and hardening guidelines for info-security department.
- Customization of Developer Portal in context of developer's identity, custom identity providers, and API monetization.
