Experiencing Microsoft Azure Windows Virtual Desktop (WVD) Cloud-based Endpoints

For organizations that are looking for a virtual desktop and/or remote application experience for their work from home and mobile users, Microsoft's Azure Windows Virtual Desktop (WVD) provides apps and full desktops to hundreds and thousands of users in a matter of days with NO purchase of servers, software, or company-owned datacenters. Convergent Computing (CCO) has created a specific service offering to accelerate an organization's experience and adoption of WVD.

CCO has been working with Windows Virtual Desktop for years from early adopter experiences through real world deployments serving thousands of work from home users in less than a week from engagement date. Having been Microsoft's Global Partner of the Year on Azure and Hybrid cloud, CCO has deep expertise in deploying Azure services, cross-integrating organization's existing Office 365 environments with Microsoft Azure, and providing hands-on knowledge transfer experience to I.T. personnel throughout the process. The following are service offerings intended to help organizations get expert assistance in the WVD experience.

Overall Planning and Deployment Experience	
WVD Deployment Experience	WVD Deployment Experience (lite)
This is a 5-day (US$10,000) offering	This is a shorter 2-½ day (US$5,000) offering
a) Starts with a half-day Windows Virtual Desktop planning conversation to confirm goals, apps, needs, and expectations b) Includes 2-days of WVD Readiness Assistance – Integrating with Office 365 logons, MFA, WVD Apps, User Access c) Up to 2-days of WVD lab and/or production deployment of WVD d) Knowledge transfer and best practices assistance	a) Starts with a half-day Windows Virtual Desktop planning conversation to confirm goals, apps, needs, and expectations b) Includes 1-day of WVD Readiness Assistance – Integrating with Office 365 logons, MFA, WVD Apps, User Access c) Up to 1-day of WVD lab and/or production deployment of WVD d) Knowledge transfer and best practices assistance

From these Windows Virtual Desktop (WVD) Deployment Experiences, CCO can typically get the organization a good experience with the WVD platform. Additional assistance may be needed for complex application configurations, broad scale deployment, complex security policy configuration, and detailed documentation. The time available through this engagement will be prioritized and agreed to in step a) of the planning process to get the most use out of the time available.
