# SQL Server Data Warehouse migration to Azure

We are Gold Partner in Data Analytics and Cloud Platform domains. Our core competence is to deliver modern Azure cloud-based Data Platforms and Data Warehousing solutions. A successful Azure Cloud migration plan starts with a clear understanding of the Customer's current solution. Through the following 3 steps we will guide the Customer through the planning process of migrating an on-premises SQL Server Data Warehouse solution to Azure.

## **Activities of the planning phase:**

**Step 1:** The existing solution is reviewed over a Teams workshop.

**Step 2:** The overall transition planning is done based on the understandings received during the first phase.

Transition planning includes:

- Creating the target Azure solution architecture.
- Transition project planning and creating a detailed task list.
- Estimating costs and schedule.

**Step 3:** The overall plan is presented to the Customer over a Teams meeting. Based on the feedback, the project plan is finalized in a iterative manner. After finalization of the project plan, the pre-study and planning project is closed

## **Deliverables:**

- Target Azure architecture
- Project plan for the migration
