

CloudTrack Governance

Gain control of your cloud environment
for successfully living in the cloud

Cloud-based IT delivery that accommodates the **best practices of the cloud**

Why?

As part of the preparations to migrate to the cloud, the administration is usually an activity after the cloud strategy has been established. The administration involves the entire organization as relationships with vision, strategy and security change the traditional way IT is run. How can IT help support the organization, and avoid shadow IT? How does the organization relate to laws and regulations? What risk must the organization consider when moving to the cloud? How should the organization relate to costs and resources?

How?

By conducting pre-defined workshops, Atea will assist the organization in planning for how they will relate to management. Based on the Atea CloudTrack Strategy, Atea will prepare a document during three workshops:

Workshop 1 is based on data collection. During the workshop we will cover several elements as a mapped baseline for creating governance.

Workshop 2 is based on governance creation. Examples are an updated operation model, compliance guardrails, guidelines, capital expenditure and roles/ access.

Workshop 3 is used to present findings and governance structure for the new environment and alternate changes if needed to an establish a governed platform in the migration/ modernization workshop. During the workshop there will be a need to mapping the current competence status according to modern IT and the gap between the current state and the need for the future state.

What?

Atea has the competence and experience to assist the organization with advice and the establishment of a structure for the administration. Together we put establish a governance team, and carry out the necessary activities to establish good management, regardless of whether it is a native, hybrid or public cloud environment.

Value

Atea CloudTrack Governance helps your organization achieve:

- Governance model and governance principles that apply to an organization's IT cloud delivery.
- A model to ensure that the organization uses cloud-based IT delivery in a way that is correct for the business.
- Create policies and regulations for how to use cloud-based IT delivery.
- Define user-friendly and secure document management to ensure fast information to employees through standardized routines / tools, clear guidelines and the right skills and structure for continuous process improvement.
