

ABERSOFT

Windows Virtual Desktop: 3 Week Implementation

**Providing you with the convenience of fast-tracked setup to the
Windows Virtual Desktop environment and professional guidance
tailored to your needs.**

Windows Virtual Desktop (WVD) provides a convenient way to virtualize desktops and apps and allow remote desktop access to users, all with a convenient and unified management experience.

Abersoft can manage the implementation process to streamline integration or migration to Windows Virtual Machine. We prioritize convenience and aim to maximize functionality for your business.

The setup and implementation of Windows Virtual Desktop will be managed by our team through the following process:

1. **Assess:** The Abersoft team will work with your business and users to understand your needs and goals, and how they connect to Windows Virtual Desktop. In this stage we will gather as much information as we can to be able to plan for the best Windows Virtual Desktop environment for your unique situation and needs.
2. **Create:** The Abersoft team will setup the Windows Virtual Desktop environment, tailoring it specifically for your needs as previously defined, as well as maximizing performance for your business.
3. **Implement:** The Abersoft team will oversee the deployment of Windows Virtual Desktop and monitor usage to understand potential areas of improvement.

Prices and timelines may vary depending on the size and scope of the project.
