

# Build able-bodied cloud native applications

Are you a business that's wanting to take advantage of Able-Bodied Cloud Native Applications in Azure, but you're unsure of the steps to get there?

Receive an assessment to understand how to unleash your business potential through scalable, intelligent cloud native applications.

With this assessment, our skilled team of Microsoft gold certified professional consultants and engineers will deep dive into your current environment; to provide a clear picture for your team of how to best utilize able-bodied cloud native applications in Azure.

Moving towards cloud native applications enables leveraging Azure to provide, availability, reliability, scalability manageability and performance.

## Agenda

- Review objectives and expectations
- Coordinate the plan and schedule for activities and workshops
- Discovery workshop – conduct discovery session with key members of Customer to understand current state, future objectives, drivers, risks, issues, and needs
- Review Azure infrastructure, identity, data and apps in current environment
- Review Azure Active Directory config
- Review current architecture for environment, including applications & services and resources including compute, networking & storage
- Review Azure PaaS and web application architecture
- Review software development lifecycle (SDLC) process
- Review DevOps repos and process
- Document findings and recommendations with considerations for architecture
- Review meeting to discuss findings

## Deliverables:

- Discovery Workshop
- Architecture Review of Application
- Assessment Workshop
- Findings and Recommendations document

Take your people and processes to the next level, by keeping your apps always on with the advantage the cloud has to offer.
