## Manage, Upgrade, Repeat.

Anyone can buy and build new technology. The challenge is how to migrate your existing environment onto the new one. Dashworks is unique software designed to help you manage and control your complex IT migration projects whether it is for transformation (e.g. Windows 10 / Office 365), Evergreen IT (e.g. Windows-as-a-Service, O365 ProPlus, hardware refresh) or any other desktop, user, application, e-mail or mobile device migration.

Spreadsheets are inefficient and can't support the transition to Evergreen IT. The nature of Evergreen IT is the constant refresh of OS, applications and hardware giving rise to multiple, regular migration projects. You need a solution built to run multiple simultaneous projects leveraging reusable project frameworks and automation to drive speed and efficiency.

Dashworks Overview

Dashworks automates manual processes associated with onboarding, scheduling, communications deployment and reporting enabling you to concentrate on managing budgets, reducing business disruption, driving efficient logistics and accelerating project delivery. Dashworks' readiness traffic light system enables you prioritise how to get the project done, fast. Understand what is ready to migrate, what is holding you up, and how you are tracking against plan.

Features and Benefits

Built to support Evergreen IT: Create multiple, repeatable project frameworks leveraging automation and standard workflows for WaaS, O365 and hardware refresh. Run all these projects simultaneously providing and a great ROI.

Accelerate delivery: Stop spending time managing spreadsheets of infrastructure and asset readiness for migration. Dashworks automatically tracks and reports asset readiness in real time dynamic dashboards and pre-canned reports enabling easy prioritisation and accelerating project delivery.

Save time & money: Industrialise the delivery of Evergreen IT initiatives through standardization and automation of manual processes, for example communications, scheduling & deployment.

Single Source of Project Truth: Collect, manipulate and maintain your Evergreen IT & migration project data in one, authoritative version of project truth.

Data Connectors: Harvests from industry-leading data sources, such as Microsoft AD, SCCM, Exchange, Desktop Analytics, ServiceNow, and many others

Business Agility: Flexible asset grouping to target departments, teams and manage priorities across business lines effortlessly.

App Compatibility: Manage your apps' lifecycle with Dashworks Analysis+ and know which apps are compatible out of the box. Automate app smoke testing, app packaging and workflow management with Dashworks' UAT module.

Better project visibility: Map your current to target plans and keep your project in sync with live asset change seamlessly.

Evergreen IT & Migration Project Challenges

Like many enterprises, you have probably already made the decision to migrate to Windows 10 and Office 365, now comes the difficult part - how to do it quickly, accurately and at the lowest cost? If or when you've migrated there's a new challenge how do you Evergeen end user IT?

Barriers to Evergreen IT & Migration

- Project scoping in a perpetual change environment.
- Lack of a single source of project truth.
- Communicating constant change to end users.
- Managing scheduling and logistics
- Lack of repeatability,

Dashworks Process - Manage, Upgrade, Repeat

Dashworks establishes a perpetual project baseline. All relevant data feeds into a central command and control center, the data warehouse. This enables you to manage your Evergreen IT initiatives & migration projects from one single command and control center — providing a single version of project truth.

Dynamic reports and dashboards keep you informed of the current state of the project at all times - showing where every asset and task is at in the process, which allows you the control you need to effectively prioritize, communicate with the business and mitigate any potential negative impacts ahead of time:
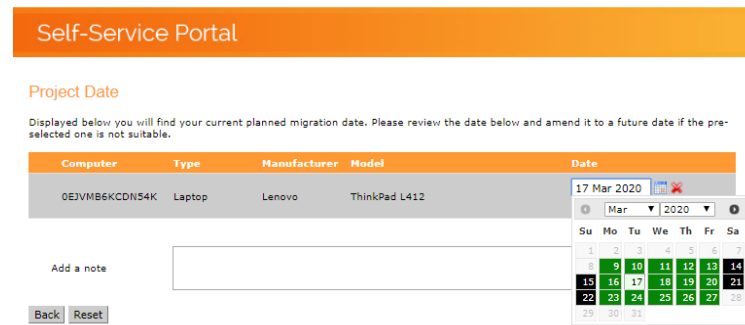

Dashworks engages your asset owners with automated communications, self-service data validation and self scheduling or rescheduling:

Dashworks enables the creation of multiple, repeatable project frameworks leveraging automation and standard workflows for WaaS, O365, hardware refresh, application roll outs and migrations. It is the only solution which enables you to run all of these projects simultaneously.

When it's time for deployment Dashworks leverages your existing deployment tools to automate OS deployments, WaaS updates, mailbox migration, app roll outs and so on, driven from the central scheduling system.

On average, Dashworks-managed projects save 30% of project management time and resources, and achieve project completion 15% earlier.
