

Power Platform Workshop

Quickly Build Custom Data-Driven Business Apps Without Compromises

Low-code technologies offer the promise of effective “citizen development,” where business users can produce their own applications with little to no support from developers. Microsoft’s Power Platform combines the strengths of key products – Power BI, Power Apps, Power Automate, and Power Virtual Agents – to serve this need.

Our Power Platform Workshop provides hands-on experience building end-to-end app solutions on the Power Platform, covering these products:

- Power Apps: Enable low code/no code application development
- Power Automate: Boost business productivity by automating organizational processes
- Power Virtual Agents: Easily build chat bots with no coding required
- Power BI: Make informed business decisions

What’s Included

Day 1: Power Platform Overview

Understand the different Power Platform products and value of each. Gain hands-on experience with tools in a lab environment. Review opportunities to extend the Power Platform with custom development in Azure.

Day 2: AI Feature Review and Proof of Concept Creation

Review AI Builder features such as Entity Extraction, RPA, and Object Detection. Learn how Power BI complements other Power Platform solutions. Work with SMEs to create a proof of concept application that fulfills your unique requirements.

Day 3: POC Stakeholder Presentation and Roadmap

Discuss how your organization can support Citizen Development and how Power Platform can scale in your organization. Create a draft roadmap for deploying the Power Platform.

Key Benefits

- Power Platform product education and experience including exploring use cases for your organization

- Demystify the Common Data Service and understand how it can fit into your citizen development strategy
- Create a proof of concept for key use cases for your organization to expel any concerns
- Create a high-level roadmap with steps needed to deploy the Power Platform

Microsoft funding may be available.

Build Apps Without Compromises

Learn how Power Platform gives everyone the power to build the apps they need with advanced functionality previously only available to professional developers, including pre-built AI components.

This workshop will empower your team to start building and launching apps using pre-built templates, drag-and-drop simplicity, and quick deployment – and then roll out continuous improvements as needed.

Additional Power Platform Services

In-a-Day Workshops

Explore additional areas of the Power Platform in a 1-day workshop covering Power Apps, Power BI, Power Automate and Power Virtual Agents.

App Development

Move from your proof of concepts to production-level applications. Create Power Platform apps and solutions using the using our proven delivery model for ongoing success.

App Modernization

Remediate, optimize, and modernize your current business applications by moving them from their current outdated, inefficient platforms to the Power Platform.

Power Platform Center of Excellence (COE)

Empower the app makers in your organization and recognize true return on investment through a center of excellence that focuses on the administration, governance, platform nurturing, development, operations and support.
