

Azure Multi-Cloud Security POC

A centralized view of your environment regardless of the location

HOW IT WORKS:

BDO Digital will deploy a framework that will centralize how you secure, monitor, and manage servers across 3 clouds. The deployment will simplify your IT Security landscape.

At the end of the engagement, your organization will be empowered to manage risk with a centralized visibility of all servers to allow for proactive security measures. This deployment will not only ultimately improve business continuity by establishing consistent processes but will also attract technical talent.

TIMELINE:

STEP 1 - Environment Discovery: Discovery of existing environment and select up to 25 servers across all 3 clouds

STEP 2 - Deployment: Deploy Azure Arc, Azure Security Center for centralized management

STEP 3 - Onboard: Integrate technical components, establish consistent organizational structure, and automate processes

Security Snapshot:
