DAZZ.

Stop finding. Start fixing.

Fix the cloud vulnerabilities that matter most.

Cloud security is broken

You're developing software in the cloud in a big way. You're finding more vulnerabilities, misconfigurations, code flaws, and exposed secrets than ever. Alerts are off the charts, and fixing vulnerabilities is slow and manual.

Discover
See your cloud dev pipeline, risk, and gaps

Triage
Cut alerts to their root causes and engage owners

Fix
Auto-generate dev-friendly fixes and stop issue recurrence

Modernize remediation in five steps

Here's how we simplify your workflow:

1.
Map pipeline

>

2.
De-duplicate and prioritize

>

3.
Find root cause and owner

>

4.
Auto-generate code fix

>

5.
Prevent recurrence

Benefits

- Pipeline visibility
- Fast fix
- Shortened resolution
- Alert reduction
- No issue propagation
- Security-dev alignment

DAZZ.

When everybody else focuses on the find, we focus on the fix.

Reap the rewards of efficient remediation

100:1
shrink alert queue

93%
reduce MTTR

improve security-dev relationship
