

# DevOps Maturity Assessment

Outperform the market. Increase innovation.

Technology is increasingly powering everything from business operations to products to employee engagements and companies across industries are feeling the need to excel at developing software. However, the IT teams in most of these companies are still spending around 74% of their time just managing legacy infrastructure and processes.

Companies who are able to remove these points of friction and create the right environment for developers are significantly improving business performance.

**4-5x** faster revenue growth

**20%** higher operating margin

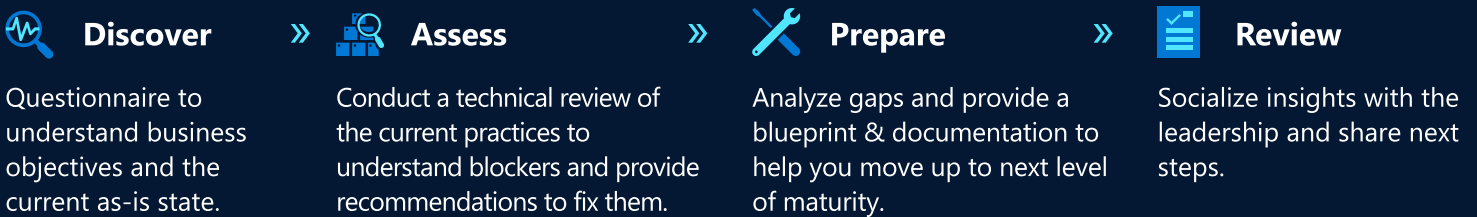

**55%** higher innovation

## Take the first step to unlocking the full-power of your developers with this assessment

Understand your organization's position on the developer maturity scale and get actionable guidance and a roadmap to power up your developer teams and drive innovation and business performance.

### Our delivery process

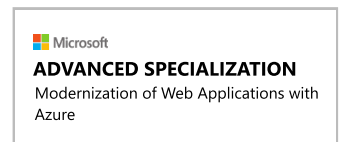

### Final deliverables

- Assessment report of the current processes & CI/CD practices.
- Evaluation report for improving key business metrics such as Developer Velocity Index (DVI).
- Documented insights into right developer tooling, practices & changes (as required) for success
- Roadmap for migrating or modernizing DevOps infrastructure to Azure.
