

# Business Bot

AI-Powered Enterprise Bot for  
your business

Bots for business or Enterprise Bots are gaining lots of traction, and these bots can help you in your digital transformation journey by providing automated services. According to Gartner, by 2021, over 50% of enterprises will invest in Bots than mobile app development. Bots are great tools to help both customers and employees to provide information quickly.

## A Digital Assistant for Your Business

Cambay's **Business Bot** is built on the **Microsoft Bot framework and PowerApp**. The bot has built-in analytics, pre-built connectors, and pre-built AI models for use cases across industries to make it easy to customize and deploy AI bots across multiple channels.

Our Business Bot will help answer most of your employee's and customers' questions on your behalf and helps efficiently manage employee and customer communication.

### Business Bot Capabilities

#### Build Smarter Help Desk

Use business bot to create and check the status of help desk tickets or incidents to reduce IT hurdles and provide consistent self-service answers. The bot also manages common queries and issues more efficiently.

#### Task Management

Today, most enterprises are including Bots in their operations. Use bot to assign tasks or look for specific tasks assigned in applications to increase productivity and reduce recurrent activities.

#### Approval Management

Handle all the approvals using automated workflows. For instance, the bot can look for planned and Adhoc leave requests from employees and get instant approval based on predefined logic.

#### Microsoft Teams Automation

Automatically set up Teams based on business events and triggers. The bot will add people automatically to those Teams, add admins, and business executives for visibility.

#### Modernize Intranet Portals

Use a bot to reside in your intranet portals or even SharePoint-based public sites. The bot allows you to SharePoint Site requests, handle document search, task approval, and other administrative tasks.

#### LoB Application Integration

The bot can be easily integrated with enterprise line of business apps or exiting legacy systems through RESP APIs. The bot works with different data sources and integrates with Microsoft AI cognitive services.

**Cost: US \$20,000**
