# ABOUT MAIL DATA MIGRATOR

Mail Data Migrator is an ideally suited product for all sized email migrations. Messages, email folders, mail contacts and tasks can seamlessly be migrated, virtually from any mail server to another provided that both environments have **IMAP** enabled mailboxes.

# LOGICAL FLOW DIAGRAM

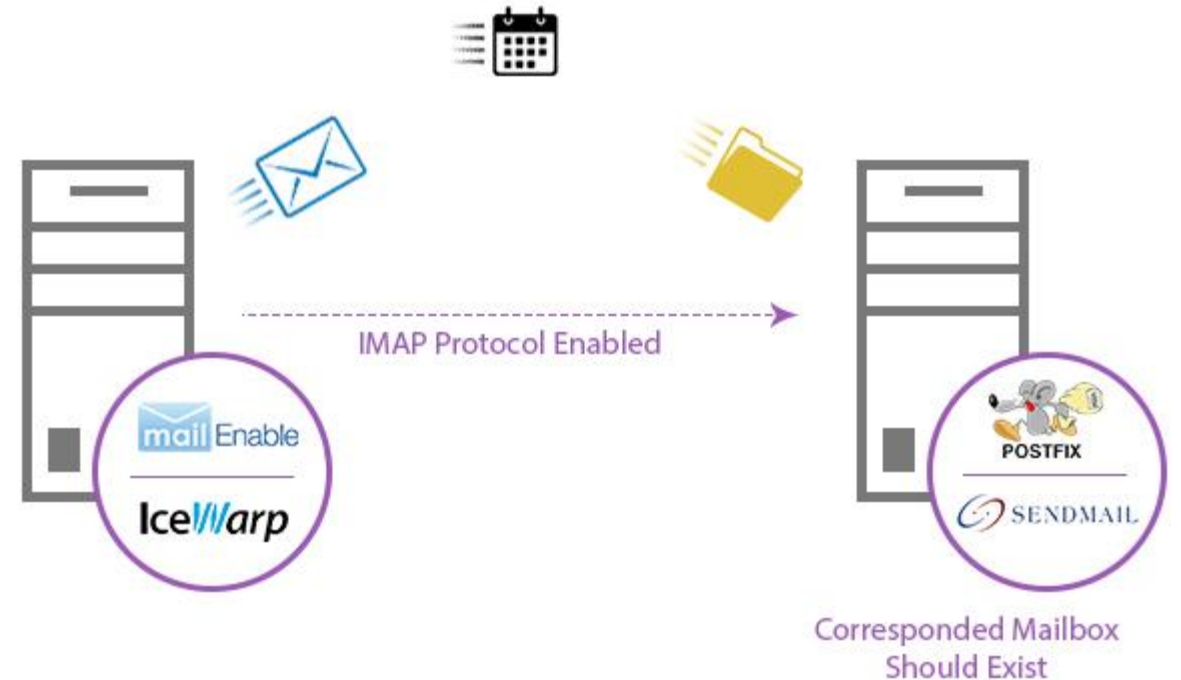

Migrate from any version of on-premises Exchange to another. Onboard to Office 365 and vice versa or migrate across a large array of legacy mail servers.

# LOGICAL FLOW DIAGRAM

Even if you are currently on a legacy mail server or you are planning to another non exchange mail server, you can still migrate mailboxes securely to the other platform.

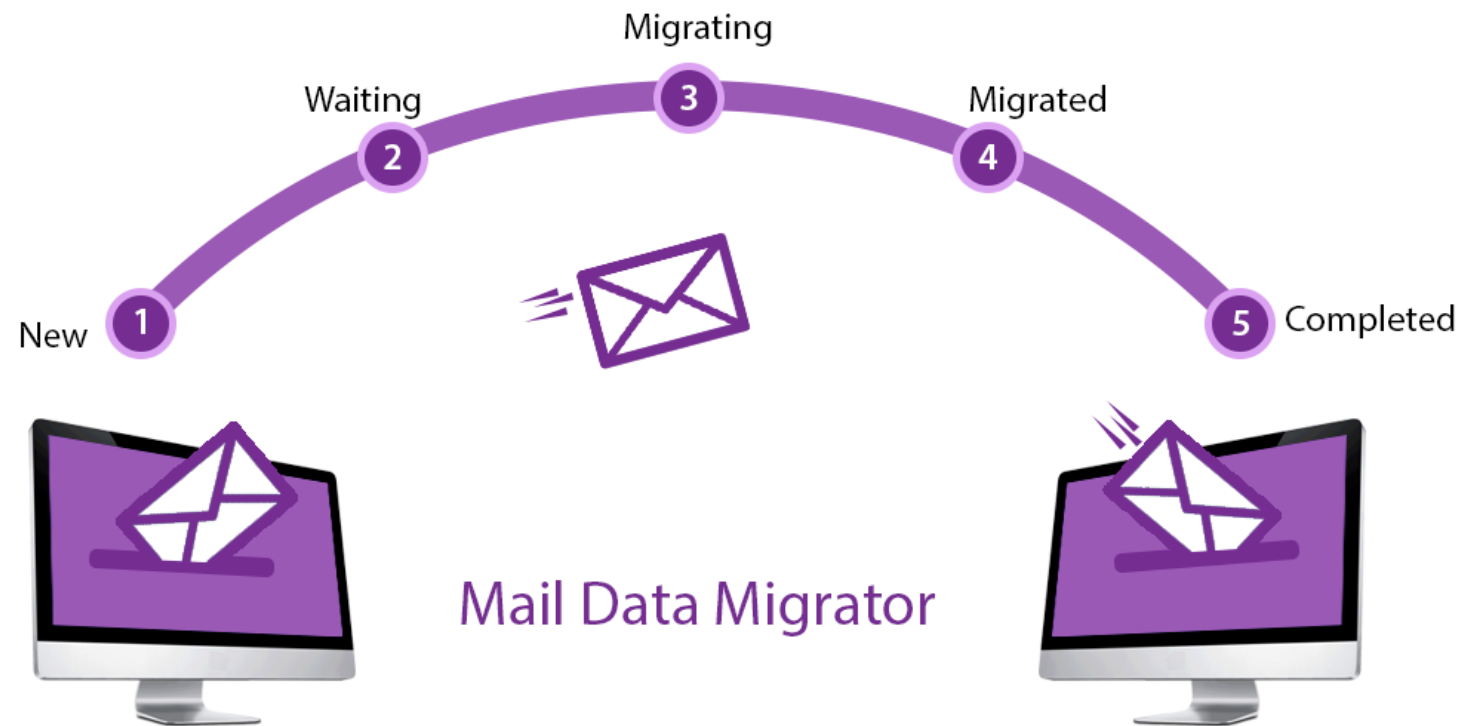

# WHY CHOOSE MAIL DATA MIGRATOR?

**HOSTING CONTROLLER**  
*CLOUD AUTOMATION SOLUTION*

- Upgrade from Legacy Servers
- Support for Cloud Platforms
- Cross-Domain Migrations
- Same-Domain Migrations

# KEY FEATURES

- Mail Data Migrator provides the following features:
- No disruption to the user during migration, assert complete control over email accounts.
- Fail-safe transfer with zero data loss.
- Migration of messages plus email folders.
- Support for IMAP enabled mailboxes.
- Staged migration.
- Interval based sync.
- Migration of tasks, contacts and calendars. (Only Exchange/Office365 to Exchange)
- Upload of mailboxes in bulk.
- Support for all Exchange versions.
- Migration to and from any mail server.

# MIGRATION SCENARIOS

Mail Data Migrator caters to different migration scenarios.

**Use Case 1:** Office 365 (no account provisioning).

**Use Case 2:** Microsoft Exchange (with account provisioning).

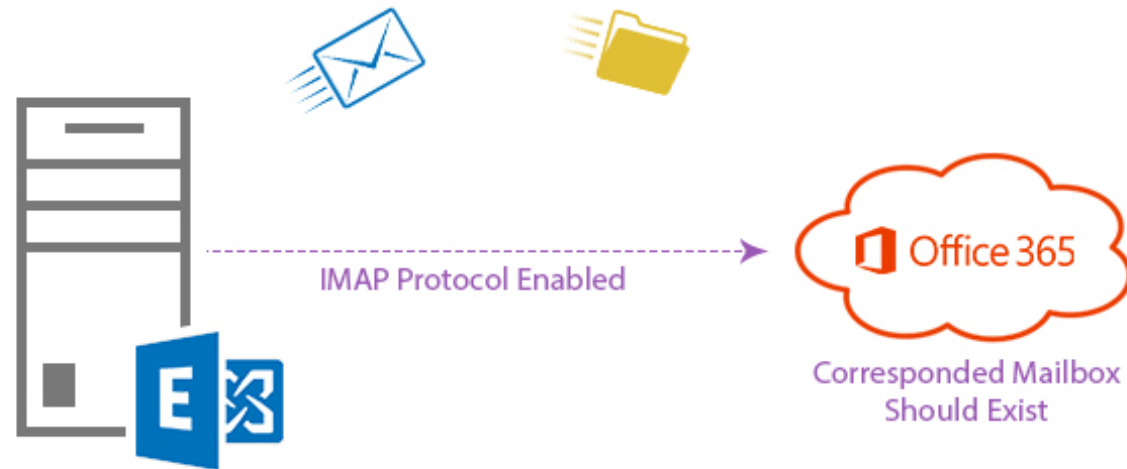

**Use Case 3:** All Others (no account provisioning).

# MIGRATION SCENARIOS

## Use Case 1: Office 365 (no account provisioning).

Mailbox data can be migrated from any mail server to Office 365. This type of migration only supports the transfer of email data, without the provisioning of a new mailbox in Office 365. A corresponding mailbox should exist in Office 365 prior to the move.

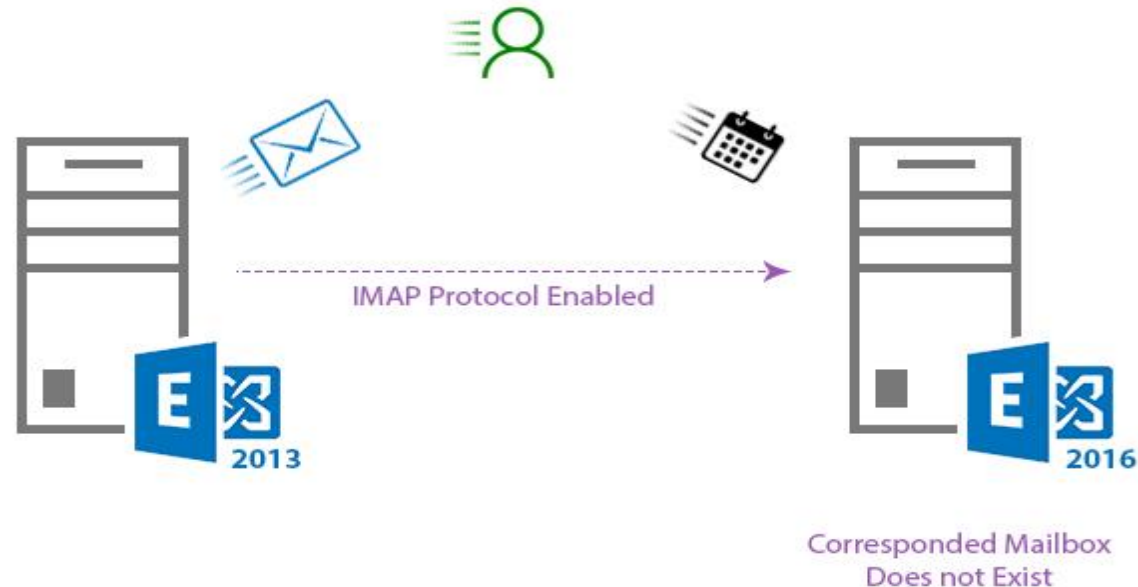

# MIGRATION SCENARIOS

**Use Case 2:** Microsoft Exchange (with account provisioning).

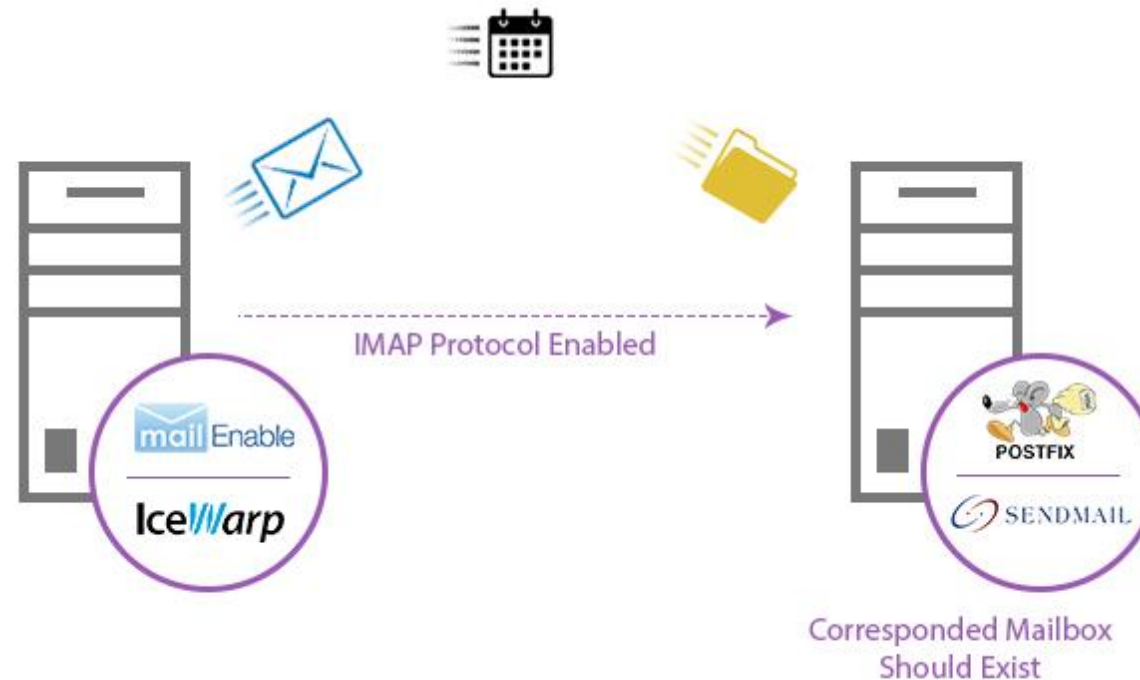

Mailboxes along with their data can be migrated from any mail server including Office365 to On-premises Exchange. This type of migration supports the transfer of email data plus the provisioning (optional) of a new mailbox in Exchange. Mail Data Migrator also have the capability to provisioning mailbox in On-Premises Exchange Server.

# MIGRATION SCENARIOS

**Use Case 3:** All Others (no account provisioning). Mailbox data can be migrated from any legacy mail server to another. This again involves just the migration of mailbox data without the provisioning element. Here a corresponding mailbox should exist in the target server prior to the move.

# SUMMARY

Mail Data Migrator provides **Real-Time** summary of domains and mailboxes with their states:

- Domain Name.
- Current State.
- Total Mailboxes.
- Migrated Mailboxes.
