FLEXIBLE SOLUTION KIT

CUSTOMER CONCERNS

Downtimes are hurting efficiency

How can we detect downtimes right away? What are our actual MTBF and MTTR?

No metrics for objective assessments

How great is our potential for improvement? How can we get metrics without exorbitant investment costs?

Order status unclear!

Which orders are being actively produced right now?
How far along are they?

Excessive production costs

Is the output of our machines too low? Are there too many rejects?

LACK OF TRANSPARENCY No real-time monitoring!

Are machines deviating from the planned output volumes?
Is everything in the good range?

Communication is hard

How can we introduce standardized, automated reporting?

The ERP planning figures aren't right!

How can we calculate deviations from plans?

Lack of personnel not detected

How can we tell if production shortfalls are being caused by insufficient staff? Are inappropriate worker qualifications causing problems?

Headcount too high!

How many people are working at which machines?

How many worker-minutes does it take to make each component?

SOLUTION – key functionality

Add-Ons	Personnel Time Recording	Shopfloor Collaboration	Quality	Production Planning	Assembly Instructions
Products	Production Metrics	Production C	Control	Alarms	Process Data
IES FIGHTEWOLK	Dashboards	Reports No	tifications Interface	ses Shopfloor Clie	ents Analytics
