vNEXT

Azure at its best.

Lay the foundations of your Data Platform with vNEXT Unify for Azure

Modern Data Platforms at their best with vNEXT Unify

Organisations continue to search for ways to manage their various data assets and deliver agile and timely organisation-wide insights. This has traditionally been a complex and expensive problem to solve, typically ending in fragmented and siloed solutions. The convergence of modern cloud-based architectures, new generation toolsets and Data Lakes enables a fast, cost-effective and agile path to insight. vNEXT Unify for Azure can fast track your journey towards a unified modern cloud data platform.

Why vNEXT Unify for Azure?

Reduce Cost and Effort

Significantly reduce cost and effort to deploy, operate and maintain your data platform.

Fast and Agile

Respond to the needs of your business quickly, ingest and serve data as and when required.

### All your data. One Platform.

All your data available in one location, in open standard formats, cleansed and catalogued.

Standardised and Automated

Select from a range of deployment patterns. Easily scale, extend and evolve your solution as required.

Simplify Delivery

Assess	Deploy	Ingest
From 1 week - $10,000	From 2 weeks - $20,000	2-week sprints - $20,000
We work with you to understand your data estate, pain points and high value use cases, designing a platform that meets your needs.	We build an extensible, secure, scalable and automated platform that can easily change and evolve with your business.	Fixed, time-boxed, 2-week engagements where we work with you to ingest your selected data sources to the platform.
Deliverables: • Discovery Workshops • Use Case Backlog • Solution Architecture Doc • Source Ingestion plan.	Deliverables: • Deployed Data Platform • As-Built Documentation • Repos and CI/CD pipelines • Monitoring and cost controls.	Deliverables: • Source Analysis and Docs • Ingestion strategy • Test and reconciliation results • Ingestion Pipelines

Then, Curate and Serve...

Tailored services for the delivery of:
• Data transformation pipelines to deliver your curated data assets
• Serving of your data assets, from Reporting & analytics, to Real-time alerts, to Apps and API's, to AI and ML.
