Data Catalog

Solution Description

ChainSys' Active Metadata Management offers a collection of metadata, combined with data management and search tools. It helps analysts and other data users to quickly find the data they need. It serves as a business metadata enriched inventory of available data and provides additional technical information to evaluate the data's fitness for intended uses.

Why Chainsys

- Organize and combine metadata to create a hierarchical structure so you can better understand what data is available, where it resides, and provide a lineage of how it has evolved
- Get better visibility on your datasets with the help of data lineage
- Understand what data the organization possesses by centralizing metadata into a single location
- Translate metadata to get curated business context as easy reference
- Supports data governance, compliance and protects sensitive data (PII), and over 200 enterprise apps
- Easily organizes enterprise wide data and reports for users to utilize with confidence
- Indexed data to make your search simple and efficient
- New Generation Reporting method using data catalog- Drill up and down the data searched and visualized.
- Eliminate the risk of data breaches
- Minimize your cost and optimize performance by data cataloging all your disparate applications.
- Rapid implementation models in just 6 weeks

Chainsys Approach

- Cloud First, Ease of use.
- SECURE – Data can be encrypted both in motion and rest
- Robust profiling engine for structured and unstructured data.
