SECURITY ASSESSMENT

IF YOU DON'T KNOW WHERE TO BEGIN, WE'RE HERE TO HELP

SME's often underestimate the threat and impact they face from Cyber-crime and as a result around 65% of SMEs have suffered a cyber-attack in the last 2 years! This threat is only getting worse making threat protection and security more important than ever.

Your organisation is at risk if you do not proactively mitigate events **before** they become issues.

As such it's important to have all the facts to understand the necessary steps to achieve a credible security solution. To get you started, Codestone will provide a comprehensive analysis of your network with detailed recommendations to help you identify where security improvements are required.

WHAT IS A SECURITY ASSESSMENT?

Our security assessment is a 66 point check that will provide a holistic view of your cloud and general security practices, which focus on the following areas:

Privileged Administration 9 checks	**Identity Governance** 6 checks	**Identity Administration** 7 checks	**Data Protection** 10 checks
Email Security 8 checks	**Monitoring & Response** 10 checks	**Teams & SharePoint** 9 checks	**General Security Practices** 7 checks

WHY HAVE A SECURITY ASSESSMENT?

Beyond establishing your security baseline and helping you plan to be more secure, the security assessment helps to ensure that you are getting the most from your current Microsoft licenses. We will look to ascertain if there are any services which you are currently licensed for and not utilising, and if there are any services which you are not using that we recommend that you should.

We will provide a report, which outlines your current position, and will include recommendations on what you can do next to close any security gaps that are discovered.

HOW LONG DOES IT TAKE?

The security assessment is a 2 day engagement, usually done remotely.
