A Foundation for Innovation

Cloud, SaaS, AI, IoT, and many other technologies have the promise to revolutionize our organizations. Pursuit of these technologies often incurs unexpected costs, delays, or perhaps it never realizes its full potential.

Why?

A failure to appreciate the full impact data has. Acknowledging this fundamental truth was a breakthrough for us, and has resulted in our customers experiencing better cloud efficiency, faster and more successful innovation, and less rework and added expense.

For over 15 years, we have tackled initiatives of every size, scope, and budget. Our intense focus on data is the key to our success. We start every engagement with an deep analysis of our customer's data. We have continued to improve our people, processes, and technologies. Datahunter is the result of this continued innovation. Datahunter is an advanced data discovery platform leveraging AI and ML, which allows us to rapidly analyze any data source and extract the insight we need to effectively manage risk, improve quality, and achieve successful innovation.

Our Data Discovery as a Service offering allows you to experience the same insights and value by leveraging our expertise. DDaaS is used to provide necessary analysis that guides cloud migration planning, application modernization, analytics and AI programs, and more. Additionally, DDaaS gives you the business case to implement your own Data Discovery practice by demonstrating the benefits without the immediate investment in your own capabilities.

DDaaS customers will see:

- 97% privacy and sensitive information identification
- Reduction of cloud storage costs by 35% or more
- Identify and correct data quality issues affecting your decision making
- and more
