Azure AD (SSO)

pwc   **Microsoft**

▶▶▶ Powered by Microsoft

A Single Sign-On (SSO) capability is central to an effective enterprise Identity and access management solution. SSO reduces the number of passwords used across different applications, significantly improves the user experience and provides seamless access to all your applications.

Cloud-native SSO solution that grow with you

Microsoft's Azure Active Directory is a cloud-based solution, which provides SSO capabilities for both on premise and cloud resources. While most features of Azure Active Directory (AD) default configurations can be leveraged within the Office 365 (O365) enterprise license, utilizing conditional access policies or identity protection to address varying use cases requires P1 or P2 licensing.

Microsoft Azure AD Key Differentiators

- Over 10,000 catalog applications to kick start your SSO platform with OOB integrations.
- Ability to integrate with Azure Self service password reset functionality for a single user experience.
- Ability to leverage Azure AD identity protection capability that enables automatic detection and remediation of identity based risks.
- Ability to leverage Azure AD passwordless authentication capabilities.

Rapid Onboarding

- PwC accelerators will increase the velocity and effectiveness of onboarding applications and end users while reducing related costs.
- Standardized integration patterns to fit your needs.
- Coexistence with existing access management solution.

Integration with Enterprise Workflows

- Integrate Azure AD with existing on-premise or cloud incident management and monitoring tools.
- PwC will implement custom log monitoring dashboards tailored to meet your requirements.

DevOps Automation

- Develop self service onboarding tools to reduce maintenance and support costs.
- Continuously optimize and refine your capabilities with PwC's proven Cyber Operations team.
- Simplify resource intensive tasks like SAML certificate updates.

Let PwC help you establish a cloud native Single Sign-On solution for your federation capable applications and accelerate SSO adoption within your organization.

Two solutions, tailored to your needs

Rapid Release

You have:
- Existing Microsoft license to enable Single Sign-On.
- A heavy existing Microsoft footprint or a forward-looking Azure-first strategy.
- Medium to large portfolio of federation capable On-Prem or cloud applications.

You want:
- A cloud based Single Sign-On platform to reduce on-prem footprint and to reduce operational overhead.
- A cyber operations function with operationally effective processes, not just more technology.

PwC & Microsoft can:
- Design and configure a scalable and secure Single Sign-On platform using Microsoft Azure AD.
- Integrate pilot group of applications with Azure AD.
- Establish processes needed for rapid onboarding of applications.
- Perform optimization and tuning to grow in line with your requirements.

Rapid Replace

You have:
- An existing Single Sign-On solution that has large on-prem footprint and lacks support for enhanced security features like conditional access.
- Existing Microsoft license to enable Single Sign-On
- A heavy existing Microsoft footprint or a forward-looking Azure-first strategy.

You want:
- To replace or augment your existing Single Sign-On solution with a modern cloud-native alternative.
- Reduce on-prem footprint.
- Improve operational efficiency.

PwC & Microsoft can:
- Migrate your existing federation capable applications on to Azure AD.
- Design and implement a solution to allow coexistence of Azure AD and existing Single Sign-On solution.
- Establish processes needed for rapid onboarding of applications.
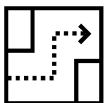

Flexible Architecture

Coexistence with existing SSO solution and integration with wide range of incident management and SIEM tools.

Enhanced Security

Support for conditional access policies to improve security without compromising usability.

Reduced Cost

Most Azure AD SSO capabilities are available with existing O365 license and reduced operational costs due to the cloud-native nature of the solution.
