enabling complex organisations to become data driven

delivering insight to inform evidence based decisions
developing analytics to enable digital organisations
accelerating outcomes for people and places

you're in good company...

Data is at the heart of every forward thinking organisation and is the fuel that drives the outcomes enabled by digital transformation.

Working in partnership with customers across the UK, including Unitary, County and District Councils, London Boroughs, Central Government and the NHS, itelligent-i's methodologies help complex organisations to enable data driven decision making. We provide expertise in analytics, data architecture, security, data quality and data management.

itelligent-i's analysts are experts in turning complex data into easy to interpret, visual, useable insights. We have a track record in developing analytics that support strategic and operational decisions, identifying large savings and tracking success.

Across the UK, itelligent-i is delivering projects that support every colleague in an organisation, delivering information directly to the necessary individual in a format that already answers their questions. There's no need for manual intervention, or manipulation to correct data.

itelligent-i is passionate about public service evolution and our team brings great expertise and experience directly from a range of public service providers. Our methodology will provide you with a data strategy and roadmap for implementing good, advanced and predictive analytics, enabling your organisation to become truly data-driven.

the public sector is constantly evolving...

... and we know your organisation will have experienced many changes over the last few years. But you simply can't progress in the digital era if you're struggling to turn data into useable insights that enable effective decision making.

The problem is, you need the right information at your fingertips to make critical decisions with confidence. Without these insights, it's like flying a plane with no instruments.

It also doesn't help that you're unlikely to have the right skills to develop the analytical insights your organisation needs from the ever-increasing data you're handling. So it's impossible to get the right information you need to make big strategic business decisions and deliver truly transformational change.

let us help you navigate...

itelligent-i has extensive Local Authority experience, can help streamline access to the data you need and turn this into new insights and advanced analytics, leading to better organisational outcomes.

Our Business Analytics Platform built on Microsoft Azure, provides a secure and efficient platform to

support the automation of the manual, timing consuming, data related tasks your business conducts repeatedly every day. We know that data security is of the highest priority and we walk through how the Business Analytics Platform supports compliance and reduces risk.

We also know there is no 'one size fits all' in Local Government. So to help identify what's right for your organisation, we work with you to conduct a Corporate Business Intelligent Review (CBIR) to find clear recommendations that enable your organisation to be genuinely data-driven.

Our Information Strategy Methodology has been designed to provide you with a corporate view of data that not only provides fantastic insights, but also provides solutions for data governance, data quality and provides a complete auditing solution for data access and distribution. It also supports you to develop the right organisational structure to help you become a self-sufficient, data-driven organisation....

...where decisions are made based on fact, not theory or conjecture.

we bring tried and tested knowledge to help you with data, security and governance considerations, skills, processes, data quality, and appropriate technology platforms.

information strategy

Our proven approach to enabling the Public Sector to use data, and provide usable information to the right people, at the right time. Improving data quality, removing manual intervention and generating significant efficiencies.

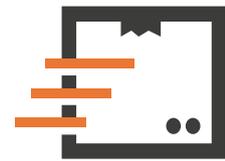

In partnership we will build a data strategy and a road map for implementing a data-driven approach for the whole organisation or department, using advanced analytics to develop your services and support decision making.

data in digital

If you're looking to transform service delivery through "digital" or wanting to better understand the critical role data will play in your digital success, Data in Digital will make all streams of data and information clear cut, simple, and easy to shape into results for your individual organisation.

itelligent-i's Data in Digital Framework will build a clear road map showing how to invest in data, to activate and demonstrate real improvements through digital investment, that can be monitored and measured.

itelligent-i products

While working with the Public Sector, our analysts have worked closely with individual departments to understand the complex business processes and implement effective data visualisations and predictive analytics.

itelligent-i has taken the best elements of all our projects for each Public Sector organisation and designed out-of-the-box solutions that can be implemented independently, to support specific services.

using our highly experienced analytical, and technical team, we help transform data into actionable insights; so organisations can make well informed, strategic and operational decisions based on fact. not theory.
