## IBM Security

Extend the Microsoft Sentinel Threat Monitoring for SAP capabilities with managed services to transform hybrid security operations

# Protecting SAP applications is uniquely challenging

Your SAP applications are business-critical, and an SAP security breach can be catastrophic. Yet, protecting SAP applications is uniquely challenging.

### SAP systems are:

Growing in complexity as organizations expand them beyond base capabilities.

Vulnerable not only to outside attacks, but also insider threats.

Complex in nature – which means that threats can emerge across multiple modules, making crosscorrelation especially important.

### Stronger Together

Combining Microsoft's <u>SAP threat monitoring</u> <u>solution</u> for Azure Sentinel with IBM Security's Threat Management Service provides your organization with continuous threat detection and analytics for SAP systems deployed on Azure, in other clouds, or on-premises.

Member of Microsoft Intelligent Security Association

# IBM Security can help you overcome those challenges

IBM Security Threat Management services integrates offensive security, full threat lifecycle management, as well as incidence response and intelligence services into a comprehensive, end-to-end program aligned to a security industry framework to get the most from your Microsoft security investment

### Highlights:

- Hybrid and multi-cloud visibility: Integrate Microsoft Sentinel with enterprise security operations and workflows to quickly identify and react to threats
- Enriched detection and investigation: 24x7 threat monitoring and investigation enhanced by billions of events analyzed by IBM's threat management platform
- Accelerate time to remediation: Refine the handling of alerts by force multiplying cloud native detection and response capabilities with IBM Security AI, machine learning and security orchestration capabilities
- Extend your security team: Team with IBM's trusted security advisors to develop and maintain specific SAP use cases, improve your threat management posture, and keep up with your enterprise's growing security needs

## Why IBM Security?

 Monitoring more than one trillion events per month, in more than 130 countries, IBM holds over 3,000 security patents
