

A better mapping platform for the location first world

Power your last-mile delivery and logistics software with more accurate maps, routing and navigation, helping you to achieve greater operational efficiency.

NextBillion.ai was very helpful in getting familiar with the software and answering questions we had during integration. The integration was very smooth and we were able to swap out our previous provider quickly.

Simply put, this was the only software that could return a driving matrix in the size we required. No one else could offer what we required.

Jamie.T, Software Developer, iApotheca

Trusted By

5X

Lower latency

140K+

Road restrictions managed

20B+

API calls handled

Large distance matrix

Support upto 5000*5000 custom distance matrix sizes, businesses can now plan better with data that results in faster and accurate ETAs

APIs for different vehicle types

Customized navigation routes for all types of vehicles, a win-win for both delivery personnel and customers

Lower operational costs

Comprehensive, detailed mapping and navigation services that helps optimize your operational costs

SaaS + PaaS components to support customers through their entire tech maturity lifecycle

APIs and SDKs (SaaS)	Map Tools (PaaS)	Map Data Management (Fully Managed Solutions)
Directions and Distance Matrix	Road restrictions	Generate private, custom maps
Route Optimisation	Automatic merge of map data	
Turn-by-Turn Navigation	GPS Data Processing	Enrich map data
Geocoding and Search	Debugging Tools	Manage map data from different sources
Map Tiles	Data Export and Publishing	

Why choose NextBillion.ai?

Easy setup and launch

Flexible

Cost-effective

Scalable
