- Data Security and Data Protection are one of the most important and yet most dynamics challenges a modern company has to face. It is not just a project you implement once but rather a continuous process.
- With data being the "new oil", your company's data is facing new internal and external threats on a daily basis. In addition there could be further legislative requirements, requiring you to apply further care with your data.
- Microsoft and its partners offer a variety of tools to tackle these challenges. With the Secure Score being one of them.
- Secure Score is a Microsoft tool, which aims to make security more transparent in your Office 365 and Azure subscriptions, and to offer suggestions on how to increase security.
- Our Secure Score Improvement Program aims to guide you through the recommendations and to analyze the impact of the required changes on your business.
- Security experts from us will review your Secure Scores every month and offer advice in meetings with your team, so you can focus on the suggestions that drive the biggest impact. And avoid issues while implementing suggestions, which impact your productivity negatively.
- Our goal is to help you keep a healthy security balance, that fits you and your data.
