

Simple and easy centralized IoT platforms AIS Universal Tracking

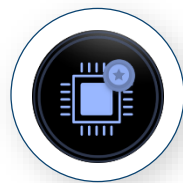

Centralize as single IoT Portal

Simple and easy to operate. Support multiple device form factors in the single platform. Easily activate the service via the QR system. (Scan and Go feature support) Suitable for use for business.

Easy to Connect

Easily connect to any IoT tracking devices via open API according with AIS standards.. Platform customization supported and able to connect to customer's system if needed.

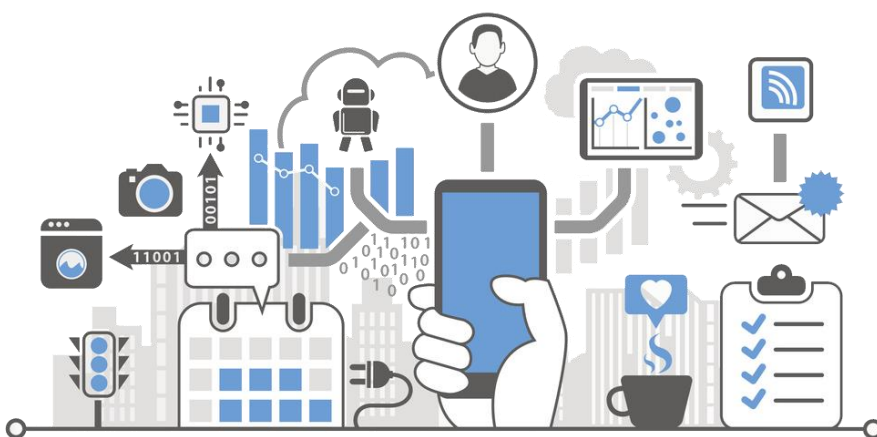

Location Tracking

Real time location tracking via GPS and with AIS LBS in case of no GPS signal (mobile location base service). The Geo-fencing management can be automatically created and notified when assets are moved in or out of a specified area.

Total solutions

Providing services in the form of total solutions. (Device + Connectivity + Platform + Web/App) The platform is compatible with AIS IOT Tracking devices, e.g. AIS Asset Tracker, AIS Motor Tracker (4G, NB-IoT) etc.

AIS Professional services for IoT Tracking

AIS provides IoT Universal Tracking Platform to meet the needs of customer focus. We are more than ready to deliver the best-in-class services to our customers ranging from solution consulting & assessment, implementation, customer adoption as well as after-sales service. This IoT platform is an AIS-Network based and is available both on website and on mobile application enabling customers to manage IoT tracking devices more efficiently.
