

Improve industrial worker safety with Video and AI

Linker Vision AI helps you keep your workers safe in hazardous job sites by using video cameras, smart auto-labeling algorithms, and Azure Stack Edge. Our system detects safety issues and concerns in real-time and alerts your team so they can improve safety and minimize accidents and injuries.

Safety

Improve employee safety and minimize on-site accidents and injuries in hazardous work environments

Continuity

Keep your operations and production running while reducing the cost of safety monitoring and insurance

Compliance

Enhance your ability to comply with government regulations, safety protocols and site / equipment inspections

Jason Lin, Chairman, Formosa Plastics

Our priority at Formosa Plastics is to ensure our employees are all safe and sound in their workplace. Over the years, we have continually tried to find a best-fit safety solution. Linker Networks' solution can check if people are wearing the right PPE, following the standard operation procedure, or entering a restricted hazardous area, and then alert on-site supervisors and managers. Our company is bringing AI to the workplace to comply with our mission and Linker's worker safety solution can deliver the right value for us.
