

Web-Lists Testing Instructions

All lists of current web site will be presented in this web part with their properties. Also hidden lists.

1. Insert Web Part to Page

The screenshot shows a SharePoint page titled "Web-Lists" by user "Ladislav Stupak". A search box is open, displaying a list of connectors. The "Web-Lists" connector is highlighted with a red box and labeled "2". A red box labeled "1" highlights the search box itself. Below the search box, a tooltip reads "Web-Lists Displaying all lists of current website".

2. Edit Web Part Properties

The screenshot displays the SharePoint user interface. At the top, a blue header bar contains the 'SharePoint' logo and name. Below this, a secondary navigation bar includes icons and labels for 'Save as draft', 'Undo', 'Discard changes', 'Page details', and 'Analytics'. The main content area features a large heading 'Web-Lists' and a user profile for 'Ladislav Stupak'. A floating toolbar is positioned over the web part, with a red box highlighting the edit icon (a pencil). The web part itself has a blue header with the title 'Web-Lists', a 'Filter by Field:' dropdown menu set to 'All', and a search input field. Below the header, a list of items is visible, including 'Title', 'Adaptive Card Images', and 'apodata'.

Title: Large List 2

Get Value

Id: 5cf7bc22-7081-4107-bc2f-9c19e74d5daa

After double click on an item a scrolling down effect will occur in case there is not enough free space in the browser below the list, so that at least the Title value will be visible below the list.

In case there is enough space in the browser below the list, after double click only the selected item will be presented below the list, without any other effect.

9. Get Value

The properties “Title” and “Id” have values of type string and therefore there will be a button “Get Value” below their values. After clicking of these buttons an input element will be presented below these buttons with the corresponding value. This value can be copied from these input elements and used elsewhere. For example, in the property “List ID” of the “Generic-List” app.

The screenshot shows a web application interface. At the top, there is a navigation bar with options: New, Send to, Promote, Page details, and Analytics. Below this is a table titled "Converted Forms" with columns for a selection icon, form name, ID, and count. The "Large List 2" form is selected. Below the table is a pagination control showing pages 1, 2, 3, 4. The main content area displays the details for the selected form, "Large List 2". It has a blue background and contains several input fields and buttons:

- Title:** Input field containing "Large List 2". Below it is a blue "Get Value" button.
- Id:** Input field containing "5cf7bc22-7081-4107-bc2f-9c19e74d5daa". Below it is a blue "Get Value" button.
- BaseTemplate:** Input field containing "100".
- BaseType:** Input field containing "0".

Below the "Id" field, there are two numbered items:

1. A blue "Get Value" button.
2. An input field containing the value "5cf7bc22-7081-4107-bc2f-9c19e74d5daa".
