

Choreo is your digital platform as a service for delivering new digital experiences fast.

Choreo abstracts away the complexity of cloud-native dev and ops infrastructure, and builds in security and governance, so you can create new services, integrations, and APIs in hours or days instead of weeks or months.

“Choreo allows you to develop APIs with a great user experience that's focused on the developer like never before. You are fully productive from start to finish. Choreo has knocked down the time-to-market!”

Fidel Prieto Estrada

Integration Consultant and Project Manager, Inetum

### Innovate In Hours

Deliver new APIs, integrations, and microservices in hours or days, not weeks or months, in an environment that lets you easily create, compose, collaborate on, and reuse API-driven business logic.

### Simplify Dev and Ops

Replace your complex infrastructure and coding with your own digital platform and the tools that make dev and ops simple and fast.

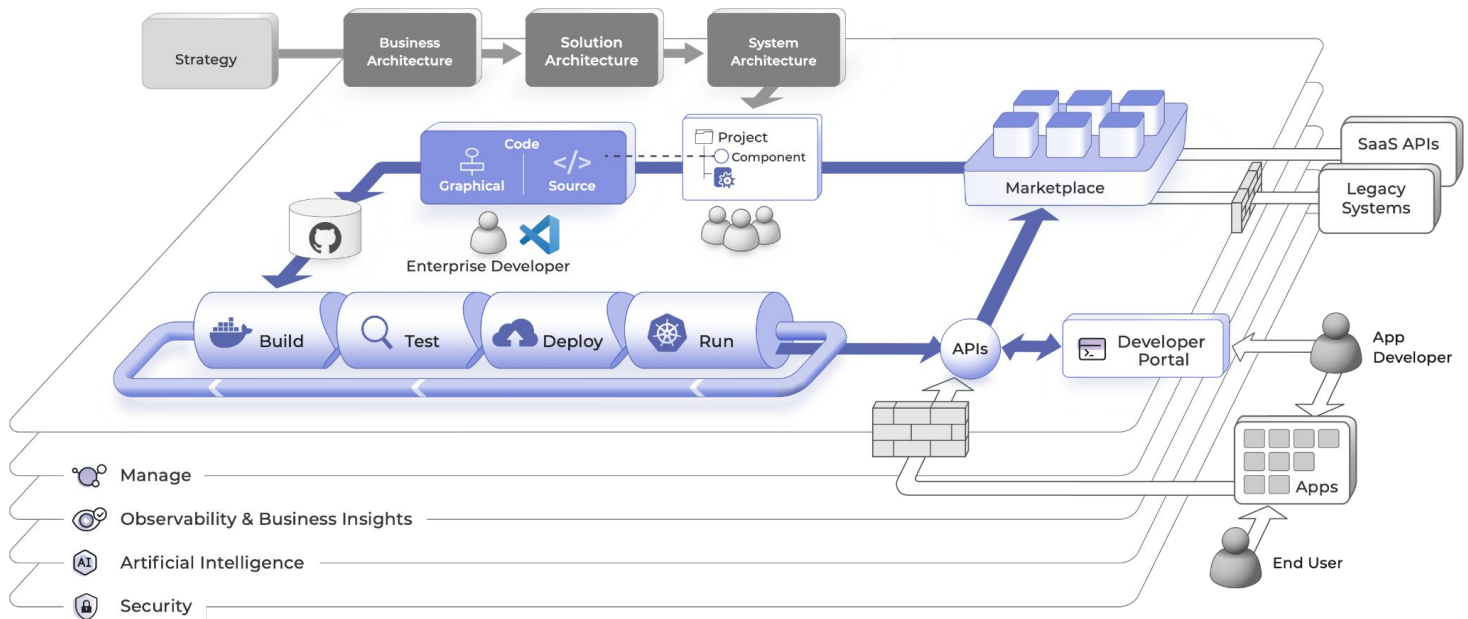

### Automate Security and Governance

Make security and governance part of your DevOps automation with a platform where (everything) APIs, integrations, and microservices are secured and governed by default.

## How It Works

Choreo makes it easier at every step for you to create the building blocks of your digital applications. From concept to production, focus on what's important, and automate the rest.

### Dev Features

#### Diagram and Code

All the power of code with the guidance and flexibility of graphical diagrams so you can choose the best method for you. Every diagram you compose shows up as code side by side. Change the code and it instantly changes the diagram.

#### Assisted Development

Choreo adds code completion and smart data mapping, plus it estimates performance as you code to help catch production issues.

#### Marketplace

Publish your APIs to a shared marketplace for internal or external developers so they can reuse completed work and avoid duplication.

### Ops Features

#### Streamlined CI/CD pipeline

Completely automated CI/CD pipeline with multi-stage deployment, including development, staging, and production so you can focus on your business logic, not operation logic.

#### Deep observability

See all observability data and logs aligned in the same timeline, with end-to-end flame graphs providing all you need to troubleshoot and quickly find the root cause.

#### No vendor lock-in

With Choreo, all your work is built on 100% open-source Ballerina so you can clone your Choreo repository and deploy it wherever you want, at any time.
