

Stop losing savings on once-off audits.

Generating cost savings in Telecom, IT & Cloud is more urgent than ever in today's economy. What's the biggest mistake business leaders make?

Turning to once-off audits from consultants or from advisors who work for the vendors who sold your business the services in the first place. You think they're the only people who really understand the services, and so for the right fee they'll turn up the best possible savings.

But it doesn't work that way.

Recent technology advances has helped to show that businesses are losing money every single day across 3 key pillars: Value Leakage, Billing Mistakes and Contract Negotiations. On average, losses are 13% of annual budgets and can get as high as 40%. These are massive numbers that can be reclaimed with the right tools and approach. Running once-off audits can never capture the full opportunity, nor effect lasting change once they collect their fee and move on (and business quickly reverts to the old way of doing things).

Instead, you want to extract the greatest value backed by a repeatable system that secures and sustains the savings, as well as monitors for new opportunities. Our AI platform is purpose built to connect your service data and run algorithms to automate the hardest tasks of auditing and optimizing Telco, IT & Cloud spend. No implementation needed. No more time-consuming and expensive audits.

Extract the greatest value with less effort with Thinking Machine.
