

Modern Authentication

One of the most vulnerable elements in your environment is the security of staff mobile devices. Our **Modern Authentication service** delivers an additional layer of security to protect your team members while they are working outside your office environment.

With a range of authentication features available, we can simplify the process in how users access your company's files and applications.

- ✓ Mobile team member protection
- ✓ Security check of your existing systems
- ✓ Simple log in with Microsoft's Authenticator
- ✓ Control business & personal devices which are accessing your network.

The **Vigilant.IT Modern Authentication** service follows a five stage process which has been designed to establish an automated process in Microsoft's Azure Active Directory (AAD).

- ✓ Authenticates user's identity against their registered username, password and a smart phone installed with the Microsoft Authenticator application.
- ✓ Authorises their computing access to your organisation based on agreed conditions configured in AAD (Conditional Access policy) and using the Open Authorisation 2.0 protocol.
- ✓ Disables any legacy application authentication method.
- ✓ Allows access only from an agreed set of countries.

Service Delivery

Our Modern Authentication service will be delivered in the following stages, each stage being dependant upon the successful completion of the previous stage.

Stage	Service	Activity
1	Systems Check	<p>We perform a review of your existing environment to determine the upgrades required for your organisation to be ready for Modern Authentication.</p> <p>Some applications in use may not support Modern Authentication and can either be excluded or upgraded in Stage 2.</p> <p>We will provide a quotation for all upgrades required and where relevant will liaise with your third party vendors in relation to upgrades required in their software.</p>
2	Systems Upgrade	<p>We will implement the upgrades identified in Stage 1 and arrange for the purchase of any relevant Microsoft licences if required.</p>

3	Confirm end-state and configure to test-ready state	We will confirm all user groups to be configured, what levels of conditional access these groups will have and we will conduct an initial test.
4	Pilot test	We will work with you to communicate with the pilot test users and conduct the pilot test. Any lessons learned and changes required to the process will be rolled into documentation and planning for the full rollout.
5	Full Rollout	We will carry out the rollout of Modern Authentication across your pre-determined users and according to a pre-agreed rollout schedule. During the rollout, your users will have access to our Service Desk for standard queries and guidance relating to the rollout.

After the rollout is complete, we won't leave you high and dry. We will be there to assist you and your team at our standard hourly rates or we can discuss ongoing assistance packages including our general Managed Services, our Managed Security Services and our pre-paid Professional Services options.

Pricing Schedule

Service Stage	Fee*
Stage 1: Systems Check	\$2,365.00
Stage 2: Systems Upgrade	Priced and agreed separately #
Stage 3: Configure to test-ready Stage 4: Pilot Test Stage 5: Full Rollout	\$2,365.00

*All fees are quoted in Australian dollars and excluding GST
