

Data Quality For SAP S/4 HANA

Solution Description

SAP S/4 HANA, like any ERP System, is prone to have data quality problems, over time, mainly due to Continuously increasing data volumes, Lack of out of box simplified Master data governance processes in SAP S/4 HANA OR data feed from various source systems into SAP S/4 HANA for master data entities like **Business Partners, Materials, BOMs and Routings etc.**

ChainSys' enterprise-class data quality engine, powered by dataZen™, has all data quality capabilities your business needs to ensure quality data in SAP S/4 HANA including various master data entities such as **Business Partners, Materials, BOMs and Routings, Prices, Assets and many more**, while migrating the data into SAP S/4 HANA (**Get Clean**) as well as during the steady state (**keep it Clean**)

Why ChainSys

- **Pre-built & configurable data models** to support SAP S/4 HANA data model which is used as a foundation to manage complex information about the **Parties, Customers, Suppliers, Contacts etc.** including **organizations, locations**, and the network of hierarchical relationships among them.
- **No programming: Configuration based implementations with flexible & Configurable data models** to support and match various master data entities SAP S/4 HANA modules such as Sales, Inventory, Receivables, Pricing, Payables, Purchasing etc.
- **Consolidate data** between multiple peripheral Systems and SAP S/4 HANA as one time consolidation / migration (**Get Clean**) or Ongoing Governance (**Keep it clean**).
- **Pre-built extractors, loaders, and integration templates** for various master data entities in SAP S/4 HANA such as Parties, Customers, Locations, Suppliers, Contacts, contact points, price lists etc.
- Data Profiling of various master data entities from SAP S/4 HANA by tying master data with transactional data statistics.
- Robust **data quality engine** that is highly configurable, highly automated, and easy to use, speeding time to adoption and value.
- **Master data Cleansing, Enrichment and Deduplication** based on Algorithms, Data Dictionary along with **Deduplication Report Dashboards** for easy data review/adjustment.
- **Configurable survivorship and attributes merging rules** for automated merging and enrichment of Golden records

- Offers **Data Quality as a Service** to SAP S/4 HANA to help cleanse, enrich and de-duplicate master data entities across various modules.
- Ability to **automatically post updates** to SAP S/4 HANA for **Merging of Parties, Customer Accounts, Supplier**, addresses, contacts etc.
- **Data Visualization** (Report, Dashboard, Analytics)
- **End-to-End Data Reconciliation** of data during and post migration

ChainSys Approach

dataZen comes with “essential” capabilities of data quality as a complete system that can coexist with any system landscape with multiple ERP systems including SAP S/4 HANA and allow various data quality processes below to be streamlined, automated, and user-friendly.

1. **Data Discovery:** - ChainSys can connect easily connect to SAP S/4 HANA to extract master data, reference data, and transactional data, and generate metadata through [data profiling](#). It can help you detect data anomalies and provide a comprehensive view of data completeness and quality to data stewards, business users, and other data consumers. Data lineage is also generated automatically.
2. **Data Cleansing & Standardization:** - ChainSys data quality can help with **Standardization/Cleansing** by detecting, correcting, and sometimes removing undesirable data records e.g., Customer or supplier names, addresses etc. It also supports standardizations and enrichments through 3rd party providers like Google, Loqate, Melissa, Dun & Bradstreet etc.
3. **Data Matching:** - ChainSys master data quality identifies and resolves duplicate records with configurable business rules, which can be based on algorithms, or exact or weighted fuzzy matching. Consolidated, grouped data is then presented on comprehensive reports and dashboards along with statistics and analytics for easy data review as well as manual adjustments.
4. **Data Quality Resolution - Review & Approval Workflows:** - Data stewards or custodians can approve system-generated matching groups along with suggested survivor records to automatically merge or perform manual adjustments by simply dragging and dropping records across the groups. Reviewed and approved groups can then be further routed for approval before committing to the golden hub.
5. **Master Data Merging & Source Updates:** - Once master data has been cleansed and merged, ChainSys data quality can migrate the cleansed and consolidated data into SAP S/4 HANA using pre-built migration and integration template as part of one-time migration (Get Clean) and in a steady state, trigger master data merge and update actions within Oracle Fusion Cloud applications for various master data entities such as

Customers, Prospects Product, Suppliers etc. as part of ongoing governance (Keep it Clean)

6. **Data Quality Monitoring:** - After all your data quality and migration processes, ChainSys can help provide a comprehensive Data Quality Monitoring dashboard and reconciliation reports
