

Learn how to use Next Generation SIEM System

Workshop Highlights

Understand the features and benefits of Azure Sentinel

Gain visibility into threats across Microsoft 365 and Microsoft Azure services

Better understand, prioritize, and mitigate potential threat vectors

Create a defined deployment roadmap based on your environment and goals

Develop joint plans and next steps

As IT becomes more strategic, the importance of security grows daily. Security information and event management (SIEM) solutions built for yesterday's environments struggle to keep pace with today's challenges—let alone tomorrow's unimagined risks.

That's why Microsoft developed Azure Sentinel, a fully cloud-native SIEM.

See and stop threats before they cause harm with an Azure Sentinel Workshop

Azure Sentinel delivers intelligent security analytics and threat intelligence across the enterprise, providing a single solution for alert detection, threat visibility, proactive hunting, and threat response.

Get an overview of Azure Sentinel along with insights on active threats to your Microsoft 365 cloud and on-premises environments with an Azure Sentinel Workshop.

Workshop plan:

Analyze your requirements and priorities for a SIEM deployment

Define scope & deploy Azure Sentinel in your production environment

Remote monitoring* and proactive threat hunting to discover attack indicators
 *optional component

Discover threats and demonstrate how to automate responses

Recommend next steps on how to proceed with a production implementation of Azure Sentinel
