Power Platform 8-Week Centre for Enablement

1st August 2022

Kainos Centre for Enablement

Organisations of all sizes are looking at how they can accelerate their digital transformation initiatives to adapt to a constantly changing world. Microsoft Power Platform provides these capabilities at scale e.g., digital transformation by migrating legacy manual processes using low-code technology. This enables organisations to realise Return on Investment (ROI) and drive continual growth through citizen development.

Low-code initiatives in large organisations require governance. One of the main benefits of low-code technology is allowing business users to easily build apps but this can lead to 'app sprawl' resulting in a very complex digital estate.

Kainos' Centre for Enablement (C4E) service allows customers to accelerate their technology adoption with the use of Power Platform across their organisation, whilst enabling strong governance controls, security and scaling.

Kainos C4E Service Offering

We use best practices and have a collection of launch pad services designed to make your business successful. Using our Citizen Development Foundations and Discovery Assessment, the first step is to help you understand the value of low-code and align this to your business challenges, maturity, and goals. We help identify the most valuable use cases for using Power Platform within your organisation to immediately realise the benefits.

We often deliver an Accelerated PoV (Proof of Value) to put a first solution or MVP (Minimum Viable Product) live to showcase the capabilities of the platform whilst upskilling the wider team. We understand technology is important but the key factor to successful adoption is the 'human' factor i.e., the people that are involved with the journey. Working with our defined methodology, we will help you implement the right ways of working, whether you have professional or citizen developers, or a mixture of both.

We offer a full Agile Delivery Program to deliver business results quickly using our exceptional delivery standards in the Kainos Intelligent Automation practice. This will ensure that you are set up for success with units across the business adopting Power Platform technologies.

The outcomes of this engagement will enable you to set up a capable C4E team that can understand the technologies and drive digital transformation and adoption across business units.

Disclaimer

This offering includes training and implementations services for Power Platform. Scope, terms and conditions, price, and timelines are based on the unique requirements of each engagement.
