Carve Your Own Path

with a Powerful Assist from **ClearDATA Professional Services**

CLEARDATA™

Your Journey. Your Goals.

Cloud Enablement

Data & Analytics

Privacy & Cybersecurity
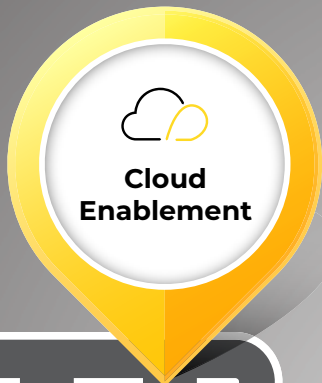

ClearDATA is healthcare's largest managed cloud and security services provider, powered by industry-leading software and a proprietary Policy-as-Code™ Engine. Our sophisticated tooling delivers a cloud ecosystem that prevents, detects, and remediates compliance drift and sensitive data security gaps, automating and enforcing continuous multi-cloud security and compliance with hundreds of controls from an array of regulatory frameworks.

Every healthcare organization has a different journey with unique goals. For some, it is secure adoption of public cloud infrastructure. Others have goals of expansion of application portfolio and new business objectives. Whatever your healthcare business aspires to do, ClearDATA has the design expertise and resources to help you attain them.

Cloud Enablement

✓ **Cloud Strategy and Transformation** consultants are your trusted advisors, providing guidance on "move to cloud" readiness, preparation, and execution. We provide capabilities including cloud readiness assessments, modernization roadmaps and cloud strategy alignment.

✓ **Cloud Migrations** focus on assessments, architecture guidance, and executing the move of existing workloads to Azure. Services include Application and Infrastructure Assessment, Dependency Mapping for Migration Waves, Account and Tagging Strategy, and Landing Zone Architecture and Deployment.

✓ **DevOps Enablement** helps you implement continuous integration and continuous delivery (CI/CD), Infrastructure as Code (IaC) processes, and tooling for cloud-native development. We begin our offerings with Current State Tooling Assessments, DevOps pipeline architecture, IaC Strategy and DevOps cultural transformation.
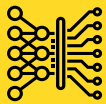

Data & Analytics

✓ **Disaster Recovery** provides customers the technology and process design, as well as implementation that enables the fast resumption of cloud services after an interruption.

✓ **Data Pipelines** enable efficient, accurate and timely validation and processing of source data. These include automated ingestions, integrations, and standardized processing of data to prepare it for use.

✓ **Database Migration** services transition customers from on-premises databases to cloud-native offerings, moving from expensive commercial databases such as Oracle and SQL Server to open-source technologies in cloud-native environments.

✓ **Data Lakes & Designs** centralize meaningful data, providing enhanced consistency, access, access control and insight.

✓ **Data Governance** coordinates the critical activities that protect, organize, and enable value from data. Yep, our consultants can help you here, too.

✓ **Analytics & Reporting** is where your organization can deliver the value of the data. Consultants provide design and implementation of data stores to support various reporting use cases.

Privacy & Cybersecurity

✓ **Compliance** is a requirement for healthcare organizations. A Security Risk Assessment led by our expert and cofounder can help you uncover problem areas and keep you compliant – especially if you participate in Merit-Based Incentive Payment Systems (MIPS).

✓ **Threat Identification & Hunting** provides incident readiness and response, vulnerability assessments, and remediation.

✓ **Cybersecurity** delivers comprehensive security assessment, preparedness training and security consultancy services.

✓ **Privacy** performs impact assessments, data locality planning and enforcement, and comprehensive data masking.

Cloud Catalyst.
Healthcare Protector.

We are Healthcare's largest managed cloud and security provider, enabled by our powerful CyberHealth™ platform. Our solutions operationalize compliance, privacy and security for the healthcare ecosystem in the public cloud.
