

Our Secure Multi-Clouds Environments & Hybrid Environments offering addresses the three most urgent security challenges

- **Rapidly changing workloads & Insecure Configurations** – Rapidly changing workloads is both a strength and a challenge of the cloud. On the one hand, end users are empowered to do more. On the other, how do you make sure that the ever-changing services people are using and creating are up to your security standards and follow security best practices?
- **Increasingly sophisticated attacks** - Wherever you run your workloads, the attacks keep getting more sophisticated. You have to secure your public cloud workloads, which are, in effect, an Internet facing workload that can leave you even more vulnerable if you don't follow security best practices.
- **Visibility into security and compliance** - The number of security alerts and alerting systems far outnumbers the number of administrators with the necessary background and experience to make sure your environments are protected. Having end to end visibility into your security and compliance and staying up-to-date with the latest attacks is a constant challenge, making it impossible to stay in place while the world of security is an ever-changing front.

How Signal Alliance Consulting can help you in your journey:

Available services depending on your needs and readiness

Planning & Assessment

- kick-off meeting introducing the Endpoint Management Workshop engagement, discuss the upcoming activities, align expectations and establish timelines.
- Run an assessment on your tenant to prepare for deployment

Deployment & Configuration

- Enable Defender for Cloud on your Subscription
- Enable the enhanced security feature
- Connect Hybrid and Multi-Cloud Resources
- Implement security recommendations in Microsoft Defender for Cloud
- Prevent misconfigurations with Enforce/Deny recommendations
- Configure additional threat protections in Microsoft Defender for Cloud like WAF & Azure DDoS
- Configure Auto Provisioning
- Set up email notifications
- Create auto-response to alert
- Customize the set of standards in your regulatory compliance

Benefits to your organization

- Enhance advanced security features that will keep your organization secured
