

Security and Compliance

3 Week Proof of Concept

Our well-defined scope engagement will help you kick start your Security and Compliance operations based on Azure.

According to expert research, around 50% of organizations embracing the cloud lack the expertise to enhance their cloud platform for better security and scalability. This affects the ability to detect and respond quickly to security incidents and leads to data leakage, business interruptions, and reputational loss.

Project Benefits

With our 3-week Proof of Concept, you will get instant access to our expertise to implement a set of scenarios based on Azure AD Premium, Microsoft Cloud App Security, Azure Information Protection, DLP, Intune Endpoint Manager, Defender for Office 365, Defender for Identity, and Defender for Endpoints that are integrated with Azure Sentinel. Our security and compliance PoC will also render a quick glimpse into implementing solutions that will help you optimize your compliance standard on a global level.

Delivery Methodology

Our PoC framework consists of 4 main project phases.

- **Assess-** Assess your existing Azure Cloud infrastructure and take inventory of the disputable areas that require enhancements.
- **Discover –** Ideate and propose relevant security and compliance best practice solutions to overcome vulnerabilities.

- **Enable** – Configure a set of scenarios (best practice solutions) as a Proof of Concept to your pilot users.
- **Implement** – Implement the PoC-approved solutions across your tenant to bolster your security.

Once the implementations are made based on the PoC, our experts will provide support across your Microsoft Azure framework on demand.

What will you get from the 3 – week Proof of Concept

- Azure Sentinel & Connected Services Configurations
- Microsoft 365 Tenant Assessment Report
- Recommendations to enhance M365 tenant security
- M365 Tenant Administration Solutions
- Recommendations to enhance email and Office 365 apps security
- Recommendations to augment global level security & compliance standards.

Microsoft Secure Score

Overview Recommended actions History Metrics & trends

Microsoft Secure Score is a representation of your organization's security posture, and your opportunity to improve it.
