Assessment Azure Readiness What is?

The Azure Readiness assessment is an analysis phase designed to [check the feasibility and readiness](#) of the customer's On-Premise infrastructure to Azure.

Through this assessment we will be able to have a vision of the level of preparation of the servers for the migration, a mapping of dependencies and an optimization of the servers.

Assessment

Azure Readiness

How does it work?

Using a scanning tool, we will carry out a study of the client's server infrastructure, starting with the following scenarios as points of origin:

- Physical machines
- Virtualization host
- Virtual servers

After performing the assessment we will have the following information:

- Server inventory
- Dependency mapping
- Indicative costs
- Estimated study TCO On-Premise vs Cloud
- Migration costs

Your trust,
our success
