Azure Migration Assessment

For many customers, challenges like capturing current state and aligning cloud features while balancing cost, resources and timeframes can impede their cloud journey.

The Vigilant.IT Azure Migration Assessment captures a technical and business understanding of your IT environment whilst also considering your business goals and delivers a realistic migration plan.

It accomplishes this in three phases that determine your current state, where you need to be and how we get you there.

What you get:
- Migration Assessment detailing your future cloud journey
- Straight forward documentation that can be presented to the internal stakeholders
- An experienced Azure partner to support you at every step of the journey

The Vigilant.IT Azure Migration Assessment follows a three stage process:

Discover

- Technical and business discovery of your IT environment
- Capture business use of IT such as hours of use and business importance
- Capture detailed technical data such as hardware, software and network details plus value added data such as architecture diagrams

Strategise

- Migration strategy that aligns to your business goals
- Proposed strategy for each application, including migration model with high level complexity and timing estimates
- Cost saving analysis of an on-premises environment versus Azure across three years

Migrate

- Realistic migration plan with methodology per application
- Prioritised order and rationale of migration
- Expert staff to answer your Azure questions and provide advice

After the rollout is complete, we won't leave you high and dry. We will be there to assist you and your team at our standard hourly rates, or we can discuss ongoing assistance packages including our general Managed Services, our Managed Security Services and our pre-paid Professional Services options.

Pricing Schedule

Service Stage	Fee*
Stage 1:	$2,365
