Microsoft Synapse
Proof of Concept (PoC)

Explore Microsoft Synapse and find out how it could help you, by performing a 7-day Proof of Concept

Microsoft Synapse provides businesses of all sizes with the freedom, agility and scalability to grow. While companies intend to start taking advantage of these benefits, it can be difficult starting on a large-scale cloud project due to the cost commitment and uncertainty of the outcome.

This is where a **Microsoft Synapse Proof of Concept (PoC)** can offer significant value to your organization; our 7-Day PoC allows you to evaluate Synapse with a small-scale partial implementation or focus on a particular area you want to evaluate. We will work closely with you to build a PoC, which can be used as a project business case, to gain company buy-in or to minimize project risk, time and cost; allowing you to make informed decisions before committing to a full project.

Process

PROOF OF CONCEPT DEFINITION

Set objectives, points for improvement and proofs to quantify results.

DATA STORAGE

Deploy PoC architecture and prepare the Synapse environment with the necessary elements for your solution.

WORKLOADS DEVELOPMENT

Dump the development of the required elements such as tables, files, ingestion, transformation and integration processes.

METRICS

Set metrics to obtain insights from your data and evaluate the results of the PoC.

RESULTS PRESENTATION

Feedback with the team to present the results of the PoC, including the consumption costs of the tests performed.

Why choose the Microsoft Synapse PoC with BertIA?

POWER BI

The visual representation of all information is built in Power BI, which makes it possible to integrate multiple technologies into the solution and allows for powerful, visual and multi-device dashboards in the best analytics tool on the market.

AUTOMATE

Just analyze, decide and act.

Measure your KPI's and how your data evolves much more efficiently.

MORE THAN DASHBOARDS

Our solution allows you to connect to all data sources of digital campaign analysis systems. We can bring all the information together in a single repository and even obtain indicators that the standard versions of social media APIs do not offer.
