Backup as a Service

Metallic™ Database Backup for SAP HANA®

As enterprises increasingly adopt SAP HANA to speed business process transformation and modernize IT, they need peace of mind that their mission-critical data is protected against the threat of data loss or attack. Metallic delivers enterprise-grade data protection as a simple cloud-delivered solution – so companies can rest easy knowing their mission-critical SAP HANA data is safe and recoverable now and for the future – whatever their cloud strategy holds.
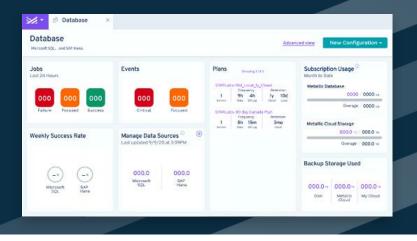

Industry leading Backup as a Service – on your terms

✓ Support for SAP HANA running on-premises or in the cloud

✓ BaaS means up in minutes with reduced management, automatic updates, and no infrastructure

✓ Optimize performance with unique storage flexibility – use Metallic cloud storage or bring your own – on-prem or in the cloud

Integrated and certified

Building on SAP's Backint for HANA interface ensures data integrity and allows for tight integration with SAP HANA Studio and SAP HANA Cockpit as well as SAP DB13.

- Tight integration through SAP APIs
- Self-service SAP HANA backups and restores directly via SAP HANA Studio and SAP
- HANA Cockpit - HANA Scale-up and Scale-out support, with scalable logfile management, and Delta backup capabilities
- Auto-discovery of System and Tenant DBs, for protection for single System DBs and multiple Tenant DBs in on HANA interface

Secure

Protect business critical databases on-premises or in the cloud with a simple, easy to use SaaS model designed using stringent security standards and privacyprotocols for advanced protection. Data is encrypted in-flight and at-rest and the solution is GDPR compliant.

- Role-based management, SSO, SAML authentication controls
- Encryption of data In-flight and at-rest
- Anomaly detection and air-gapped copies for ransomware protection
- High level of security with support for SAP HANA-side encryption and SAP HANA secure store authentication

Easy to manage

Avoid multiple point products and writing scripts with this simple, integrated solution for databases and other structured data. Admins get the clear visibility they need to easily manage and monitor backups and restores. Users get peace of mind with granular, fast recovery to meet strict SLAs.

- Recover SAP HANA systems and tenant databases individually from streamed backups
- Effective multi-streaming accelerates SAP HANA backups and restores
- Refresh SAP landscape systems running on SAP HANA – via our easy-to-use WebGUI and automated database copy.

Supported Platforms and Applications

SAP HANA

- Version 1.0 SPS9 -12
- Version 2.0 SPS01 or higher

Cloud Storage Targets

- Metallic Cloud Storage Microsoft Azure Storage Amazon S3

On-Premises Storage

- Hedvig Distributed Storage Platform
- NetApp E-Series
- Dell EMC Isilon
- Dell EMC DataDomain
- Pure Storage FlashArray
