

Efficient office and conference room management

Avnet's Smart Office solution, built on Microsoft Azure, makes it simple, fast and convenient for employees to find and book meeting rooms with their smartphones from anywhere in the building. Customizable dashboards, built-in analytics and reporting help you understand how rooms and equipment are being used so you can better manage floor plans and allocate resources.

Convenient scheduling

View all available rooms and reserve and extend bookings directly from a mobile phone, anywhere in the office.

Increased productivity

Employees spend less time scheduling meetings and more time collaborating whenever they need to.

Rich usage analytics

Get usage data such as peak times and popular equipment, so you can better optimize facilities usage.

Smarter office management

At a large technology company, office space was not used efficiently and employees could spend up to 30 minutes looking for an available conference room. Using the sensor technology, mobile apps and analytics in Avnet's Smart Office solution, they were able to optimize office space usage, save time and increase employee productivity.
