

# EXODUS: EMM Migration, Simplified

## EXODUS by Mobinergy

Exodus is designed to help migrate your iOS Android and macOS devices from one EMM to another in the most frictionless way possible. Using a Cloud service and native mobile apps, Exodus can help you migrate a few hundred or dozens or thousands devices in no time.

## BENEFITS

### KEEP TRACK

Between the un-enrollment and the re-enrollment of a device Exodus is here to guarantee that no device is lost in the process even if interrupted.

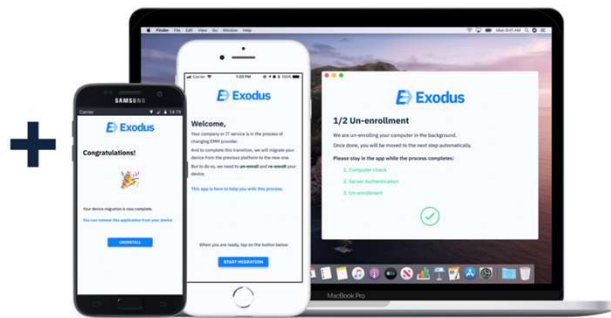

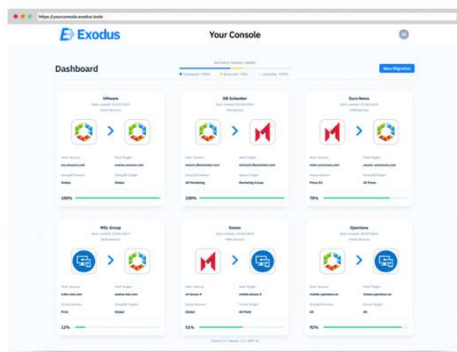

### SAVE TIME

With a simple and frictionless process, Exodus reduces error-prone tasks to a bare minimum and decreases drastically the timeframe needed for such a project.

### CUT YOUR BUDGET

Exodus will help minimise migration time, technical requirements, end-user support and most importantly the impact on users productivity.

## WHAT OUR CUSTOMERS ARE SAYING

*"Exodus clearly was the best compromise between downtime and migration cost to migrate more than 17000 users in a short period of time."*

– Sebastien Debaille, Head of Mobility Engineering, BPCE –
